A New Concept for Tuning Design Weights in Survey Sampling Sarjinder Singh, Stephen A. Sedory, Maria Del Mar Rueda, Antonio Arcos, Raghunath Arnab, 2015-11-17 A New Concept for Tuning Design Weights in Survey Sampling Jackknifing in Theory and Practice introduces the new concept of tuning design weights in survey sampling by presenting three concepts calibration jackknifing and imputing where needed This new methodology allows survey statisticians to develop statistical software for analyzing data in a more precisely and friendly way than with existing techniques Explains how to calibrate design weights in survey sampling Discusses how Jackknifing is needed in design weights in survey sampling Describes how design weights are imputed in survey sampling *Lubricant Properties, An...* Jacques Denis, 2000

Hydrodynamic Lubrication J. Frene, D. Nicolas, B. Degueurce, D. Berthe, M. Godet, 1997-11-10 Hydrodynamic Lubrication is the culmination of over 20 years close collaborative work by the five authors and discusses the practical use of the formalization of low pressure lubrication The work concentrates on the developments to journal and thrust bearings and includes subjects such as the dynamic behaviour of plain and tilting pads the thermal aspects the positive and negative effects of non cylindricity and shape defects resulting from manufacturing or operation the effects of inertia the appearance of Taylor's vortices and of turbulence and their repercussions The book contains an abundance of test results objectively compared with theoretical conclusions and a chapter on technical considerations to ensure that draft mechanisms will work satisfactorily under the imposed conditions Hydrodynamic Lubrication is an essential reference book for future and

practising engineers who want to put hydrodynamic and hydrostatic journal bearings and thrust bearings into operation under conditions of total safety **Petroleum Refining. Vol. 4 Materials and Equipment** Pierre Trambouze, 2000-10-02

This five volume series covers the entire range of technologies used in the petroleum refining industry The books are intended for students and for the engineers and technicians who operate in refineries This volume is devoted to the main equipment used in a refinery or a petrochemical complex classified by technology The basic principles for design and sizing are presented for each type of equipment The details of practical implementation are also discussed with a view to maximum efficiency Equipment selection criteria are provided for specific applications Lastly emphasis is placed on the major trends in equipment development Contents I Separation technologies 1 Gas liquid contactors for distillation plate columns 2 Gas liquid contactors for distillation packed columns 3 Solvent extraction equipment 4 Techniques for physical separation of phases II Heat transfer technologies 5 Process furnaces 6 Heat exchangers III Reaction technologies 7 Chemical reactor technology IV Mechanical operations 8 Pumps compressors turbines and ejectors 9 Agitation and mixing techniques V Control and optimization techniques 10 Control and Monitoring 11 Rational use of energy References Index **Climatologie de la mer** Association de recherche Action des éléments (France), 1980 **Catalogo Systematico Dei Libri** Commission of the European Communities. Bibliothèque centrale Luxembourg, 1968 Games in Management Science Pierre-Olivier Pineau, Simon Sigué, Sihem Taboubi, 2019-08-14 This book covers a large spectrum of cutting edge game theory applications in management science in which Professor Georges Zaccour has made significant contributions The book consists of 21 chapters and highlights the latest treatments of game theory in various areas including marketing supply chains energy and environmental management and cyber defense With this book former Ph D students and successful research collaborators of Professor Zaccour wish to honor his many scientific achievements **The Potential of Deep Seismic Profiling for Hydrocarbon Exploration** Bertrand Pinet, Christian Bois, C. Bois, International Lithosphere Program, 1990 **National Union Catalog**, 1981 Includes entries for maps and atlases **Guide international de l'énergie nucléaire** Editions Technip, 1987 Vector Control of Induction Machines Benoît Robyns, Bruno Francois, Philippe Degobert, Jean Paul Hautier, 2012-02-06 After a brief introduction to the main law of physics and fundamental concepts inherent in electromechanical conversion Vector Control of Induction Machines introduces the standard mathematical models for induction machines whichever rotor technology is used as well as several squirrel cage induction machine vector control strategies The use of causal ordering graphs allows systematization of the design stage as well as standardization of the structure of control devices Vector Control of Induction Machines suggests a unique approach aimed at reducing parameter sensitivity for vector controls based on a theoretical analysis of this sensitivity This analysis naturally leads to the introduction of control strategies that are based on the combination of different controls with different robustness properties through the use of fuzzy logic supervisors Numerous applications and experiments confirm the validity of this simple solution

which is both reproducible and applicable to other complex systems Vector Control of Induction Machines is written for researchers and postgraduate students in electrical engineering and motor drive design Fundamental Aspects of Heterogeneous Catalysis Studied by Particle Beams H.H. Brongersma,R.A. van Santen,2013-03-08 Present day heterogeneous catalysis is rapidly being transformed from a technical art into a science based technology A major contribution to this important change is the advance of surface spectroscopic techniques able to characterize the complex surfaces of the heterogeneous catalytic system The Advanced Study Institute on which the current proceedings is based has as its primary aim the bringing together of a variety of lecturers outstanding in those fields of experience to enable a broad coverage of different relevant approaches Not only catalyst characterization but also catalytic reactivity had to be covered in order to relate catalyst properties with catalyst performance Since modern catalysis relates catalytic performance to microscopic molecular catalyst features theoretical electronic aspects also had to be included The Advanced Study Institute had a unique feature in that it brought together physicists catalytic chemists and chemical engineers whom rarely directly interact From physics especially new experimental possibilities of beams were emphasized At present it is possible to obtain very detailed information on model catalysts whilst the applications to practical catalysts are gaining rapidly in sophistication Apart from the plenary lectures the Institute included hot topics to highlight special developments and offered participants the opportunity to present contributed papers either orally or as a poster These contributions formed an integral part of the summer school and significantly enhanced the interaction between participants Inclusion of the hot topics and contributed papers in these proceedings give them an added topical value **Guide du pétrole : Volume 57** ,1988 **Catalog of Copyright Entries.
