## Technology Mini Pat 8:

*Indigenous Technology Knowledge Systems* Mishack T. Gumbo, P. John Williams, 2023-07-21 There has been a growing interest in indigenous knowledge systems and research. This interest has been mainly triggered by the need to decolonize education as a response to the colonial onslaught on indigenous knowledge and people. Research has however concentrated on the generality of the indigenous knowledge system rather than on its related dimensions. One area that has suffered a lack of attention is indigenous conceptions of science, technology, engineering, and mathematics (STEM) despite the unquestionable evidence of STEM in indigenous contexts. Most STEM is presented by colonial establishments and representations especially in developed modern urban contexts which portray STEM as a colonial construct. This book focuses on indigenous technological knowledge systems education (ITKSE). Indigenous people have been at the front of technological developments from pre-colonial times. The list of pre-colonial industries, science, and technology is extensive, including blacksmithing, wood carving, textile weaving, and dyeing, leather works, beadworks, pottery making, architecture, agricultural breeding, metal working, salt production, gold smithing, copper smithing, leather crafting, soap making, bronze casting, canoe building, brewing, glass making, and agriculture, for example. In some parts of the world such as Africa and Australia, these technologies still exist. ITKSE should not be left to exist outside of the technology education curriculum and classroom as it can benefit both indigenous students who have been denied learning about what is relevant to them and non-indigenous students. These cultural groups can expand their knowledge of technology by learning both ITKSE and Western technological knowledge systems education (WTKSE). ITKSE also presents opportunities for technology teachers to reflect on and revisit their depth of technological knowledge, pedagogies, and assessment. The intent of this book is transformational in the sense that it brings decolonial and indigenous perspectives into the technology education context. It extends technology education in the sense that it will not only influence Western-minded architects, artisans, designers, etc., but encourage indigenous-mindedness as well.
