Telexistence Susumu Tachi, 2010 Telexistence is a fundamental concept which refers to the general technology that enables a human being to have a real time sensation of being at a place other than where he or she actually exists while being able to interact with the remote environment which may be real virtual or a combination of both It also refers to an advanced type of teleoperation system that enables an operator at the control to perform remote tasks dexterously with the feeling of existing in a surrogate robot working in a remote environment Telexistence in the real remote environment through a virtual environment is also possible This book is the first book on telexistence written by the inventor of the concept of this emerging technology It introduces the concept of telexistence explains how this concept can be realized illustrates precisely real examples of the realization of the concept and determines its future advancement Publisher's web site [HCI International 2021 - Posters](#) Constantine Stephanidis, Margherita Antona, Stavroula Ntoa, 2021-07-03 The three volume set CCIS 1419 CCIS 1420 and CCIS 1421 contains the extended abstracts of the posters presented during the 23rd International Conference on Human Computer Interaction HCII 2021 which was held virtually in July 2021 The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions The posters presented in these three volumes are organized in topical sections as follows Part I HCI theory and methods perceptual cognitive and psychophysiological aspects of interaction designing for children designing for older people design case studies dimensions of user experience information language culture and media Part II interaction methods and techniques eye tracking and facial expressions recognition human robot interaction virtual augmented and mixed reality security and privacy issues in HCI AI and machine

preprocessing of the signals provided by the ears This is realized in the subcortical parts of the auditory system In the title of a prior book the term Binaural Listening is used to indicate a focus on sub cortical functions Psychoacoustics and auditory signal processing contribute substantially to this area The preprocessed signals are then forwarded to the cortical parts of the auditory system where among other things recognition classification localization scene analysis assignment of meaning quality assessment and action planning take place Also information from different sensory modalities is integrated at this level Between sub cortical and cortical regions of the auditory system numerous feedback loops exist that ultimately support the high complexity and plasticity of the auditory system The current book concentrates on these cognitive functions Instead of processing signals processing symbols is now the predominant modeling task Substantial contributions to the field draw upon the knowledge acquired by cognitive psychology The keyword Binaural Understanding in the book title characterizes this shift Both books The Technology of Binaural Listening and the current one have been stimulated and supported by AABBA an open research group devoted to the development and application of models of binaural hearing The current book is dedicated to technologies that help explain facilitate apply and support various aspects of binaural understanding It is organized into five parts each containing three to six chapters in order to provide a comprehensive overview of this emerging area Each chapter was thoroughly reviewed by at least two anonymous external experts The first part deals with the psychophysical and physiological effects of Forming and Interpreting Aural Objects as well as the underlying models The fundamental concepts of reflexive and reflective auditory feedback are introduced Mechanisms of binaural attention and attention switching are covered as well as how auditory Gestalt rules facilitate binaural understanding A general blackboard architecture is introduced as an example of how machines can learn to form and interpret aural objects to simulate human cognitive listening The second part Configuring and Understanding Aural Space focuses on the human understanding of complex three dimensional environments covering the psychological and biological fundamentals of auditory space formation This part further addresses the human mechanisms used to process information and interact in complex reverberant environments such as concert halls and forests and additionally examines how the auditory system can learn to understand and adapt to these environments The third part is dedicated to Processing Cross Modal Inference and highlights the fundamental human mechanisms used to integrate auditory cues with cues from other modalities to localize and form perceptual objects This part also provides a general framework for understanding how complex multimodal scenes can be simulated and rendered The fourth part Evaluating Aural scene Quality and Speech Understanding focuses on the object forming aspects of binaural listening and understanding It addresses cognitive mechanisms involved in both the understanding of speech and the processing of nonverbal information such as Sound Quality and Quality of Experience The aesthetic judgment of rooms is also discussed in this context Models that simulate underlying human processes and performance are covered in addition to techniques for rendering virtual environments that can then be used to test these

models The fifth part deals with the Application of Cognitive Mechanisms to Audio Technology It highlights how cognitive mechanisms can be utilized to create spatial auditory illusions using binaural and other 3D audio technologies Further it covers how cognitive binaural technologies can be applied to improve human performance in auditory displays and to develop new auditory technologies for interactive robots The book concludes with the application of cognitive binaural technologies to the next generation of hearing aids

Telecommunication, Teleimmersion, and Telexistence II

Susumu Tachi,2005 Summary Telexistence is the concept of overcoming limitations of time and space by presenting a sensation of existence in a virtual sense Teleimmersion and telexistence connect the space that we live in or that we exist in Technology based on this concept enables users to meet and talk to one another as if they share the same space and time even if they are far apart from each other This is the goal of the development of mutual telexistence communication systems as a natural progression from the telephone to the telexistence videophone One of the highlights of this publication is the section on TELESAR TELEXistence Surrogate Anthropomorphic Robot which is an anthropomorphic robot controlled by a human operator at a remote site with a sensation of presence The robot is coated with retro reflective material so that a person wearing an HMP Head Mounted Projector sees the telexisting operator instead of the robot This book focuses on the present status and future prospects of this emerging technology of teleimmersion and telexistence and reports on recent results
