- Tellabs® 8800 Smart Routers

The Unit Software Management Package enables network operators to download and activate new software versions of the Tellabs 8000 system and Tellabs 8100 system network elements. The process is conducted efficiently at the network level by supporting download to multiple nodes and units simultaneously. The Tellabs 8000 intelligent manager supports remote management of software upgrade and installation throughout the network, eliminating the need for costly site visits.

Features and Benefits

Report Software and Hardware versions

The Unit Software Management Package provides reports on current embedded software versions and hardware versions for units in the network elements. These reports can be created for a selected unit type or for a selected set of network elements or network regions.

Downloading embedded software

With the Unit Software Management Package, the service provider can automatically download new embedded software into one or several units anywhere in the network.

The embedded software management is based on plans which allow defining software download and activation tasks for multiple nodes and units at a time. The plan is comprised of a list of nodes and units to which the new software is to be installed. To speed up downloading, multiple plans can be pre-defined in the Tellabs 8000 intelligent manager and activated at user-controlled times. When a plan is activated, the system downloads the embedded software to all the nodes and units, activates the new software and performs the node version update in the Tellabs 8000 intelligent manager. During the plan activation, the current status of the individual operations is displayed in the graphical user interface.

If needed, the user may suspend the download and continue it later. To prevent any errors in the download, the Unit Software Management Package checks for inconsistent software.
