Jakob von Uexküll and Philosophy Francesca Michelini, Kristian Köchy, 2019-12-09 Dismissed by some as the last of the anti Darwinians his fame as a rigorous biologist even tainted by an alleged link to National Socialist ideology it is undeniable that Jakob von Uexküll 1864 1944 was eagerly read by many philosophers across the spectrum of philosophical schools from Scheler to Merleau Ponty and Deleuze and from Heidegger to Blumenberg and Agamben What has then allowed his name to survive the misery of history as well as the usually fatal gap between science and humanities This collection of essays attempts for the first time to do justice to Uexküll's theoretical impact on Western culture By highlighting his importance for philosophy the book aims to contribute to the general interpretation of the relationship between biology and philosophy in the last century and explore the often neglected connection between continental philosophy and the sciences of life Thanks to the exploration of Uexküll's conceptual legacy the origins of cybernetics the overcoming of metaphysical dualisms and a refined understanding of organisms appear variedly interconnected Uexküll's background and his relevance in current debates are thoroughly examined as to appeal to undergraduate and postgraduate students as well as postdoctoral

researchers in fields such as history of the life sciences philosophy of biology critical animal studies philosophical anthropology biosemiotics and biopolitics *Making it Formally Explicit* Gábor Hofer-Szabó, Leszek Wroński, 2017-04-18 This book collects research papers on the philosophical foundations of probability causality spacetime and quantum theory The papers are related to talks presented in six subsequent workshops organized by The Budapest Krak w Research Group on Probability Causality and Determinism Coverage consists of three parts Part I focuses on the notion of probability from a general philosophical and formal epistemological perspective Part II applies probabilistic considerations to address causal questions in the foundations of quantum mechanics Part III investigates the question of indeterminism in spacetime theories It also explores some related questions such as decidability and observation The contributing authors are all philosophers of science with a strong background in mathematics or physics They believe that paying attention to the finer formal details often helps avoiding pitfalls that exacerbate the philosophical problems that are in the center of focus of contemporary research The papers presented here help make explicit the mathematical structural assumptions that underlie key philosophical argumentations This formally rigorous and conceptually precise approach will appeal to researchers and philosophers as well as mathematicians and statisticians , **Understanding and Applying Assessment in Education** Damian Murchan, Gerry Shiel, 2017-04-29 All teachers are responsible for assessing the children they teach and the outcomes of any assessment are important for individual learners and the wider school This book is your one stop shop for understanding assessment in schools It covers formative and summative approaches used across primary and secondary education supporting a balanced overview with policy examples drawn from the UK Ireland and wider international contexts Designed as a pragmatic handbook for new teachers and those training to teach the book discusses key principles of assessment before providing guidance on developing and carrying out assessment in the classroom and looking at how assessment information can be used to benefit your teaching and the children you teach **Is There Purpose in Biology?** Denis Alexander, 2018-06-22 Atheists assert that the natural world has no meaning or purpose Dr Denis Alexander Emeritus Director of The Faraday Institute for Science and Religion at St Edmunds College Cambridge draws a different conclusion Not only do recent evolutionary biological data appear inconsistent with the claim that the world is purposeless but the Christian doctrine of creation has provided and continues to provide both context and stimulus for the study of the natural world Christians started biology However is a belief in an omnipotent benign Creator consistent with a world of pain and suffering From a lifetime s study in the biological sciences Denis Alexander believes that whilst the cost of existence is extremely high it can nonetheless be squared with the idea of a God of love whose ultimate purposes for humankind render that cost more comprehensible **A Dynamic Theory of Hylomorphism** Jeremy W. Skrzypek, 2025-06-20 This book introduces a novel hylomorphic theory of material objects according to which material objects are understood as comprised or composed of both matter and activity where activity plays the role of form This theory hyloenergeism captures the

dynamic nature of many of the objects of our experience such as living organisms better than other leading varieties of contemporary hylomorphism Hylomorphism is the theory according to which material objects are understood as comprised or composed of two fundamental parts components aspects or principles matter and form Many contemporary hylomorphists endorse a version according to which the form of a material object is understood as a certain kind of complex relation or structure realized in its material parts Others endorse a version according to which the form of a material object is understood as a certain kind of power or disposition continuously activated in the object or in its material parts This book argues against structural and dispositional varieties of hylomorphism in favor of a third approach hyloenergeism Drawing on various aspects of traditional Aristotelian hylomorphism and other contemporary occurrence based theories of material objects it argues that hyloenergeism has the resources to successfully avoid or resolve several major concerns for other competing hylomorphic views A Dynamic Theory of Hylomorphism will appeal to researchers and graduate students working in metaphysics ancient philosophy and medieval philosophy

to come **The Ethnographic Experiment** Edvard Hviding, Cato Berg, 2014-06-01 In 1908 Arthur Maurice Hocart and William Halse Rivers conducted fieldwork in the Solomon Islands and elsewhere in Island Melanesia that served as the turning point in the development of modern anthropology The work of these two anthropological pioneers on the small island of Simbo brought about the development of participant observation as a methodological hallmark of social anthropology This would have implications for Rivers later work in psychiatry and psychology and Hocart's work as a comparativist for which both would largely be remembered despite the novelty of that independent fieldwork on remote Pacific islands in the early years of the 20th Century Contributors to this volume who have all carried out fieldwork in those Melanesian locations where Hocart and Rivers worked give a critical examination of the research that took place in 1908 situating those efforts in the broadest possible contexts of colonial history imperialism the history of ideas and scholarly practice within and beyond anthropology The Nature of Nature Bruce Gordon, William Dembski, 2014-04-29 The intellectual and cultural battles now raging over theism and atheism conservatism and secular progressivism dualism and monism realism and antirealism and transcendent reality versus material reality extend even into the scientific disciplines This stunning new volume captures this titanic clash of worldviews among those who have thought most deeply about the nature of science and of the universe itself Unmatched in its breadth and scope The Nature of Nature brings together some of the most influential scientists scholars and public intellectuals including three Nobel laureates across a wide spectrum of disciplines and schools of thought Here they grapple with a perennial question that has been made all the more pressing by recent advances in the natural sciences Is the fundamental explanatory principle of the universe life and self-conscious awareness to be found in inanimate matter or immaterial mind The answers found in this book have profound implications for what it means to do science what it means to be human and what the future holds for all of us **Computing with New Resources** Cristian S. Calude, Răzvan Freivalds, Iwama Kazuo, 2014-12-09 Professor Jozef Gruska is a well known computer scientist for his many and broad results He was the father of theoretical computer science research in Czechoslovakia and among the first Slovak programmers in the early 1960s Jozef Gruska introduced the descriptive complexity of grammars automata and languages and is one of the pioneers of parallel systolic automata His other main research interests include parallel systems and automata as well as quantum information processing transmission and cryptography He is co-founder of four regular series of conferences in informatics and two in quantum information processing and the Founding Chair 1989-96 of the IFIP Specialist Group on Foundations of Computer Science *Secrets of Life, Secrets of Death* Evelyn Fox Keller, 2014-02-25 The essays included here represent Fox Keller's attempts to integrate the insights of feminist theory with those of her contemporaries in the history and philosophy of science **4D Visualization of Matter** Ahmed H Zewail, 2014-09-12 Ever since the beginning of mankind's efforts to pursue scientific inquiry into the laws of nature visualization of the very distant and the very small has been paramount The examples are numerous A century ago the atom appeared mysterious a raisin or plum pie of no

structure until it was visualized on the appropriate length and time scales Similarly with telescopic observations a central dogma of the cosmos was changed and complexity yielded to simplicity of the heliocentric structure and motion in our solar system For matter in over a century of developments major advances have been made to explore the inner microscopic structures and dynamics These advances have benefited many fields of endeavor but visualization was incomplete it was limited either to the 3D spatial structure or to the 1D temporal evolution However in systems with myriads of atoms 4D spatiotemporal visualization is essential for dissecting their complexity The biological world is rich with examples and many molecular diseases cannot be fully understood without such direct visualization as for example in the case of Alzheimer s and Parkinson s The same is true for phenomena in materials science chemistry and nanoscience This anthology is an account of the collected works that have emerged over the past decade from Caltech Through recent publications the volume provides overviews of the principles the electron based techniques and the applications made Thanks to advances in imaging principles and technology it is now possible with 4D electron microscopy to reach ten orders of magnitude improvement in time resolution while simultaneously conserving the atomic spatial resolution in visualization This is certainly a long way from Robert Hooke s microscopy which was recorded in his 1665 masterpiece *Micrographia*

Robert P. George, 2014-05-20 It is a common supposition among many of our cultural elites that a constitutional wall of separation between church and state precludes religious believers from bringing their beliefs to bear on public matters This is because secular liberals typically assume that their own positions on morally charged issues of public policy are the fruit of pure reason while those of their morally conservative opponents reflect an irrational religious faith In *The Clash of Orthodoxies* Robert George shows that this supposition is wrong on both counts Challenging liberalism s claim to represent the triumph of reason George argues that on controversial issues like abortion stem cell research euthanasia homosexuality and same sex marriage traditional Judeo Christian beliefs are actually rationally superior to secular liberal alternatives Drawing on the natural law philosophical tradition George demolishes various secularist pretenses such as the notion that the very young and very old among us are somehow subpersonal and not worthy of full legal protection He reveals the dubious person body dualism implicit in secularist arguments and he demonstrates the flawed reasoning behind the idea that the state ought to be neutral regarding competing understandings of the nature and value of marriage George also revisits the controversy surrounding his participation in the First Things End of Democracy symposium in which he considered the relevance of Catholic teachings regarding the legitimacy of political regimes to the contemporary American situation George argues that because natural law and natural rights doctrine lie at the foundation of the American republic the judicial reading of the Constitution that has undermined democracy in order to enshrine the secularist agenda is deeply flawed In advancing his thesis George argues for a return to old fashioned liberalism a worldview that he claims is best exemplified by Pope John Paul II whose teachings laud democracy religious liberty and economic freedom while also recognizing the

demands of civil rights social and economic justice and the principle of subsidiarity These demands restrain Catholics and indeed all people of faith from making personal freedom an absolute and George takes to task those political leaders who though believers have denied or ignored the political responsibility this entails The Clash of Orthodoxies is a profoundly important contribution to our contemporary national conversation about the proper role of religion in politics The lucid and persuasive prose of Robert George one of America s most prominent public intellectuals will shock secular liberals out of an unwarranted complacency and provide powerful ammunition for embattled defenders of traditional morality **Brain**

Theory C. Wolfe, 2014-05-13 Philosophy has long puzzled over the relation between mind and brain This volume presents some of the state of the art reflections on philosophical efforts to make sense of neuroscience as regards issues including neuroaesthetics brain science and the law neurofeminism embodiment race memory and pain
