

Reed-Solomon Decoder

- The Reed-Solomon (RS) decoder, invented by Reed and Solomon in 1960, is pivotal for error correction in digital communication
- RS codes are non-binary error-correcting codes known for correcting both random and burst errors
- The RS decoder operates in two phases: error detection using syndromes and error correction with algorithms like the Berlekamp-Massey
- These decoders are ubiquitous, being used in data storage, telecommunications, wireless communication, digital broadcasting, and QR codes due to their robust error-handling capacity
