Morgan William Crofton,1877 **Neural Modeling** Ronald MacGregor,2012-12-06 The purpose of this book is to introduce and survey the various quantitative methods which have been proposed for describing simulating embodying or characterizing the processing of electrical signals in nervous systems We believe that electrical signal processing is a vital determinant of the functional organization of the brain and that in unraveling the inherent complexities of this processing it will be essential to utilize the methods of quantification and modeling which have led to crowning successes in the physical and engineering sciences In comprehensive terms we conceive neural modeling to be the attempt to relate in nervous systems function to structure on the basis of operation Sufficient knowledge and appropriate tools are at hand to maintain a serious and thorough study in the area However work in the area has yet to be satisfactorily integrated within contemporary brain research Moreover there exists a good deal of inefficiency within the area resulting from an overall lack of direction critical self evaluation and cohesion Such theoretical and modeling studies as have appeared exist largely as fragmented islands in the literature or as sparsely attended sessions at neuroscience conferences In writing this book we were guided by three main immediate objectives Our first objective is to introduce the area to the upcoming generation of students of both the hard sciences and

psychological and biological sciences in the hope that they might eventually help bring about the contributions it promises
