

5. SST5 setting method

SST5 is used for judging the quality of the spring solenoid valve and steering angle correction solenoid valve drive signals.
It is used to check whether the drive signal from the SCPU board in the PS controller or the drive signal from the DC/SD board is defective.

- (1) Disconnect the wiring between CN146 and CN147, and set SST5.

Always connect the connector connected with more number of cables to the SCPU board (CN146).
Since the number of pins and the shape are the same at both ends of SST5, carefully avoid wrong connection.

- (2) Check the ON state of each solenoid in the ANLACTIVE mode.

- Carefully avoid wrong connection of CN146 and 147.
- Though error codes 54-2 and 73-2 are displayed upon key switch ON, it does not indicate an abnormality.
