Vaccine Analysis Strategies Principles And Control:

Vaccine Analysis: Strategies, Principles, and Control Brian K. Nunnally, Vincent E. Turula, Robert D.

Sitrin, 2014-11-27 This book is an indispensable tool for anyone involved in the research development or manufacture of new or existing vaccines. It describes a wide array of analytical and quality control technologies for the diverse vaccine modalities. Topics covered include the application of both classical and modern bio-analytical tools, procedures to assure safety and control of cross-contamination, consistent biological transition of vaccines from the research laboratory to manufacturing scale, whole infectious attenuated organisms such as live attenuated and inactivated whole cell bacterial vaccines and antiviral vaccines using attenuated or inactivated viruses, principles of viral inactivation and the application of these principles to vaccine development, recombinant DNA approaches to produce modern prophylactic vaccines, bacterial subunit, polysaccharide and glycoconjugate vaccines, combination vaccines that contain multiple antigens as well as regulatory requirements and the hurdles of licensure.

Bioprocessing of Viral Vaccines Amine Kamen, Laura Cervera, 2022-09-06

This book focuses on cell culture produced viral vaccines to meet the needs of the rapidly expanding research and development in academia and industry in the field. This book introduces the basic principles of vaccination and the manufacturing of viral vaccines. Bioprocessing of Viral Vaccines will provide an overview of the advanced strategies needed to respond to the challenges of new and established viral infection diseases. The first few chapters cover the basics of virology and immunology as essential concepts to understand the function and design of viral vaccines. The core of the content is dedicated to process development including upstream processing and cell culture of viral vaccines, downstream processing and extensive analytical technologies specific to viral vaccines. Advanced process analytical technologies (PAT) and Quality by Design (QbD) concepts are also introduced in the context of vaccine manufacturing. The case studies included cover inactivated, attenuated vaccines exemplified by influenza vaccines, subunit vaccines exemplified by Virus Like Particles (VLPs), HPV vaccines and subunit vaccines, Flublock vectored vaccines, adenoviruses and Vesicular stomatitis Virus (VSV) vectored vaccines, genomic vaccines, DNA and mRNA vaccines as developed for COVID-19 response in particular and a review of COVID-19 vaccines approved or in advanced clinical trials. This book is aimed at graduate engineers and professionals in the fields of vaccinology, bioprocessing and biomanufacturing of viral vaccines.

Specification of Drug Substances and Products Christopher M. Riley, K. Lien Nguyen, 2024-09-22 Specification of Drug Substances and Drug Products is a fully comprehensive reference on Specification Setting for Pharmaceuticals. There have been several recent developments in the ICH Guidelines which were not captured in previous editions, notably the new guideline on Development of Analytical Procedure and the revisions to the validation guidelines and the specification guidelines. This edition contains chapters discussing the unique requirements for the universal critical quality attributes as well as the specific tests required to

characterize and control different types of products ranging in complexity from small molecules in immediate release oral dosage forms to complex products such as drug antibody conjugates and mRNA based products This substantially expanded revision of the 2nd edition will serve as practical comprehensive reference for scientists managers educators and consultants involved in the development and regulation of pharmaceutical products Presents critical assessment potential impact and application of the recent revisions to ICH guidelines on method validation Q2 as well as the latest guideline on Analytical Method Development Q14 and the special regional requirements in non ICH regions Addresses comprehensive treatment of the development and validation of analytical methodologies used in the analysis control and specification of a variety of different types of dosage forms ranging from traditional oral solid dosage forms to proteins nRNA based drugs vaccines and gene therapy This book will also address drug device combinationproducts such as digital drug delivery systems transdermal systems and inhalation products Presents detailed treatment of latest statistical approaches including new approaches to the treatment of validation data method specification setting and shelf life prediction based on stability data Recent Trends in
