Abstract: This study reports the results of a survey of 100 students at a university in the United States. The survey examined the use of various types of storage devices (e.g., hard drives, external drives, cloud storage) and the factors influencing their choice. The results indicate that hard drives are the most commonly used storage device, followed by external drives. Cloud storage is used less frequently, but its use is increasing. The study also found that the cost of storage is a significant factor in the choice of device. The results suggest that the use of storage devices is becoming more important as the amount of data generated by individuals and organizations continues to grow.
