narratives of patients with many different neurological impairments. The narratives illuminate medical details of the diseases while illustrating how those diseases play out in a patient's thoughts and actions, bringing a more human aspect to the ailments. These neurological impairments take on many forms. Losses can be highly disruptive to a patient's life, such as Jimmie G's severe memory loss. However, many patients find ways to adapt to their ailments and recoup those losses in other ways, such as Mr. P, a music teacher who lost his ability to distinguish faces and objects, even mistaking his wife for his hat, who learned to sing to himself to keep from becoming disoriented. And MacGregor, who installed a level on his glasses to enable him to stand upright to correct a persistent lean.

Overview of the book Important People Key Takeaways Analysis of Key Takeaways **An Analysis of Oliver Sacks's *The Man Who Mistook His Wife for a Hat* and Other Clinical Tales** Dario Krpan, Alexander O' Connor, 2017-07-05

In *The Man Who Mistook His Wife for a Hat*, neurologist Oliver Sacks looked at the cutting edge work taking place in his field and decided that much of it was not fit for purpose. Sacks found it hard to understand why most doctors adopted a mechanical and impersonal approach to their patients and opened his mind to new ways to treat people with neurological disorders. He explored the question of deciding what such new ways might be by deploying his formidable creative thinking skills. Sacks felt the issues at the heart of patient care needed redefining because the way they were being dealt with hurt not only patients but practitioners too. They limited a physician's capacity to understand and then treat a patient's condition. To highlight the issue, Sacks wrote the stories of 24 patients and their neurological clinical conditions. In the process, he rebelled against traditional methodology by focusing on his patients' subjective experiences. Sacks did not only write about his patients in original ways; he attempted to come up with creative ways of treating them as well. At root, his method was to try to help each person individually with the core aim of finding meaning and a sense of identity despite or even thanks to the patient's condition. Sacks thus redefined the issue of neurological work in a new way, and his ideas were so influential that they heralded the arrival of a broader movement: narrative medicine, that placed stronger emphasis on listening to and incorporating patients' experiences and insights into their care.

[The Mechanics of Passion](#) Alain Ehrenberg, 2020-09-23

Cognitive neuroscience, once a specialized area of psychology and biology, has enjoyed increased worldwide legitimacy in the last thirty years, not only in psychiatry and mental health but also in fields as diverse as

education economics marketing and law How can this surge in popularity be explained Has the new science of human behaviour now become the barometer of our conduct and our lives taking the place previously occupied by psychoanalysis Rather than asking if neuronal man will replace social man or how to surmount the opposition between the biological and the social The Mechanics of Passions uncovers hidden relationships between global social ideals and specialized concepts of neuroscience and cognitive science Proposing a historical sociology situated in the dual contexts of the history of sciences and the history of self representation Alain Ehrenberg describes the conditions through which cognitive neuroscience has developed and acquired a strong moral authority in our individualistic society permeated by ideas values and norms of autonomy Cognitive neuroscience offers the promise of turning personal limitations into assets by exploring an individual s hidden potential The Mechanics of Passions identifies this as the echo of social ideals of autonomy affirming that the moral authority of cognitive neuroscience stems as much from cultural norms as from any results of scientific or medical experimentation

Psychologies in Revolution Hannah Proctor, 2020-01-13 This book situates the work of the Soviet psychologist and neurologist Alexander Luria 1902 1977 in its historical context and explores the romantic approach to scientific writing developed in his case histories Luria consistently asserted that human consciousness was formed by cultural and historical experience He

described psychology as the science of social history and his ideas about subjectivity cognition and mental health have a history of their own Lines of mutual influence existed between Luria and his colleagues on the other side of the iron curtain but Psychologies in Revolution also discusses Luria s research in relation to Soviet history from the October Revolution of 1917 through the collectivisation of agriculture and Stalinist purges of the 1930s to the Second World War and finally the relative stability of the Brezhnev era foregrounding the often marginalised people with whom Luria s clinical work brought him into contact By historicising science and by focusing on a theoretical approach which itself emphasised the centrality of social and political factors for understanding human subjectivity the book also seeks to contribute to current debates in the medical humanities

Neuroscience and Art Amy Ione,2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a

review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses
