

Controls and Functions

- 1. Mode Switch** - This control is used to select the desired transmit mode. The modes available are: CW, LSB, USB, AM, and FM.
- 2. SWR/CAL Control** - This control is used to adjust the calibration of the SWR meter while in SWR/CAL mode.
- 3. RIT Control** - The Receiver Incremental Tuning control is used to fine tune the received signal. This is used in USB and LSB modes to obtain maximum clarity of reception, and in CW mode to control the pitch of the beat note. The RIT control can tune the receive frequency about ± 3 kHz. This control will not affect the transmit frequency, or the frequency display, but will change the receive frequency.
- 4. RIT Switch** - This switch enables or disables the RIT control. Press to enable (button down). Press again to disable (button up).
- 5. RF Gain Control** - This is used to vary the RF input to the receiver. This control is used to help eliminate strong, adjacent signals.
- 6. Mic Gain Switch** - Pressing this switch activates the built-in microphone attenuator. This feature is designed to be used when operating the HR 2600 in high ambient noise environments.
- 7. TX Switch** - The TX switch is used to lock the transmitter on for tuning purposes, except in CW mode. In CW mode the external key must be locked down. The microphone is disconnected unless the PTT switch is also depressed.
- 8. Meter Switch** - This switch is used to select the operating mode for the multifunction meter. The meter modes are: S-RF, Modulation, SWR Calibration setting, and SWR. Each time the Meter switch is pushed, the next mode is selected. See the operation section for more information on meter usage. The currently selected mode is displayed above the meter.
- 9. NB Switch** - Pressing this switch enables the built-in noise blanker. The noise blanker in your HR 2600 is very effective in eliminating interference generated by vehicle ignition systems.
