The Internet Is Not The Answer:

The Internet Is Not the Answer Andrew Keen, 2018-09-01 The renowned Internet commentator and author of *How to Fix the Future* exposes the greed, egotism and narcissism that fuels the tech world. Chicago Tribune: The digital revolution has contributed to the world in many positive ways but we are less aware of the Internet's deeply negative effects. *The Internet Is Not the Answer* by longtime Internet skeptic Andrew Keen offers a comprehensive look at what the Internet is doing to our lives. The book traces the technological and economic history of the Internet from its founding in the 1960s through the rise of big data companies to the increasing attempts to monetize almost every human activity. In this sharp, witty narrative informed by the work of other writers, reporters and academics as well as his own research and interviews, Keen shows us the tech world's warts and all. Startling and important, *The Internet Is Not the Answer* is a big picture look at what the Internet is doing to our society and an investigation of what we can do to try to make sure the decisions we are making about the reconfiguring of our world do not lead to unpleasant, unforeseen aftershocks. Andrew Keen has written a very powerful and daring manifesto questioning whether the Internet lives up to its own espoused values. He is not an opponent of Internet culture; he is its conscience and must be heard. Po Bronson, 1 New York Times bestselling author. **Social and Behavioral**

Research and the Internet Marcel Das, Peter Ester, Lars Kaczmirek, 2018-10-24 Highlighting the progress made by researchers in using Web-based surveys for data collection, this timely volume summarizes the experiences of leading behavioral and social scientists from Europe and the US who collected data using the Internet. Some chapters present theory, methodology, design and implementation, while others focus on best practice examples and/or issues such as data quality and understanding paradata. A number of contributors applied innovative Web-based research methods to the LISS panel of CentERdata collected from over 5,000 Dutch households. Their findings are presented in the book. Some of the data is available on the book website. The book addresses practical issues such as data quality, how to reach difficult target groups, how to design a survey to maximize response and ethical issues that need to be considered. Innovative applications such as the use of biomarkers and eye tracking techniques are also explored. Part 1 provides an overview of Internet survey research, including its methodologies, strengths, challenges and best practices. Innovative ways to minimize sources of error are provided along with a review of mixed mode designs, how to design a scientifically sound longitudinal panel and avoid sampling problems and address ethical requirements in Web surveys. Part 2 focuses on advanced applications, including the impact of visual design on the interpretability of survey questions, the impact survey usability has on respondents' answers, design features that increase interaction and how Internet surveys can be effectively used to study sensitive issues. Part 3 addresses data quality, sample selection, measurement and non-response error and new applications for collecting online data. The issue of underrepresentation of certain groups in Internet research and the measures most effective at reducing it are also addressed. The book concludes with a discussion of the importance of paradata and the Web data collection process in

general followed by chapters with innovative experiments using eye tracking techniques and biomarker data This practical book appeals to practitioners from market survey research institutes and researchers in disciplines such as psychology education sociology political science health studies marketing economics and business who use the Internet for data collection but is also an ideal supplement for graduate and or upper level undergraduate courses on Internet research methods and or data collection taught in these fields Periodical Acquisitions and the Internet Nancy

Internet Popular Culture and Jewish Values Lawrence H. Sherlick, Junhao Hong, 2008. Are the values of students and their teachers threatened each time they enter the uncharted waters of the Internet's popular culture content? The Internet has indeed come of age and as was the case with traditional mass media, the Internet has been increasingly examined for its positive and negative effects, particularly on children. What triggered the present study was a newspaper article that described a ban on computers and the Internet imposed in October 1999 on its followers by the Belz Hasidic, an Israeli Ultra Orthodox or Haredi religious sect. This edict was also endorsed by 30 leading Ultra Orthodox rabbis from various other religious communities in Israel. Explaining that this original prohibition against computers and the Internet was later revised to permit computer use but continue the ban on Internet access, the article noted the Belz Hasidic sect determined that computers have proved valuable in teaching the Bible and in running businesses. The Internet, however, was declared out of bounds largely because the information it exposed conflicted with Ultra Orthodox principles rejecting modernity, popular culture, and especially its proliferation of links to pornographic sites. This study examines the convergence of religion, elementary education, Internet technology, and popular culture messages within Jewish elementary school classrooms in Israel. This research examines the methods used by Israeli computer coordinators to manage the convergence of Jewish or humanistic values with potentially conflicting Internet-generated popular culture messages. It asks what values, whether Jewish values or human values at the core of the Jewish educator's belief system, are important to transmit to their students. It questions what types of popular culture messages carried by the Internet conflict with these values. More importantly, this study surveys how educators and students evaluate these conflicting messages in relation to the values they hold and the manner in which these conflicts are managed. This is an important book for those in communication education, Jewish studies, and sociology of religion.

The Real Internet Architecture Pamela Zave, Jennifer Rexford, 2024-08-06 This book offers a description of the architecture of the Internet as it actually exists now It is a revolutionary description based on a completely new model of network architecture explaining how the Internet has evolved from its origins and how it is still evolving and exposing previously unarticulated patterns and trends in network architecture Essentially all discussion of the Internet is still dominated by the classic five layer model put forth by its originators This model is so outdated that it is a hindrance to understanding Internet evolution as well as to teaching and doing effective research on networking This book replaces it with a new model of networking called compositional network architecture This model has been formalized but the book does not use the formal model rather the book relies on the model's accuracy and precision as a foundation for a convincing informal explanation accessible to a much broader audience than a formal model would be the formal model will be available on a companion website along with teaching material Many scholars and practitioners seeing the Internet only through the lens of the classic Internet architecture complain that the Internet has not evolved past its original architecture Compositional network architecture is a general model for describing many architectures and it shows clearly how the Internet has evolved since the early 1990s and how it continues to evolve Though the book is based on a conceptual model and is therefore a relatively abstract treatment it is illustrated with hundreds of contemporary Internet examples so there is no lack of concrete detail or grounding in reality Compared to older works on networking the book is also more concerned with network services how a network helps users communicate This is a natural outgrowth of the Internet as subject matter Performance and scalability are the usual themes of Internet literature as they were certainly the most important challenges of the Internet's early years Since the 1990s however progress on performance and scalability has been steady and incremental The major motivation for Internet evolution since then has been the need for enhanced services including mobility multicast security privacy reliability and support for content distribution and the book will engage with these themes It will serve as a reference for anyone dealing with internet architecture and as a graduate textbook for networking courses
