When diagnosing and determining an individual's additional needs and learning disabilities they are differentiated in to 4 main sectors mild, moderate, severe and profound. By doing so you can uncover the severity of their learning disabilities thus making it easier to identify the right support needed to aid them. It must be stressed that the description attached to their learning disability (mild, moderate, severe and profound) is not a representation of them as a person, therefore generic terms should not be used when describing an individual.

- **Mild learning disabilities**
Individuals with mild learning disabilities are able to talk but difficulties are more apparent when it comes to understanding & explaining new information. Most of the time individuals with mild learning difficulties need more time when trying to comprehend new complex ideas.
- **Moderate learning disabilities**
Day to day living activities and tasks such as dressing yourself and making food your self is found to be very stressful and confusing for individuals with moderate learning disabilities. They also have basic language skills and vocabulary when it comes to expressing themselves, feeling and what they want.
- **Severe and profound learning disabilities**
Individual with serve and profound learning disabilities are found to mostly communicate with hand gestures, reason being their language skills and vocabulary are found to be very basic, so hand gestures are found to be a perfect suit. They have high levels of support and usually have more than one disability that needs support.

Diagnostic procedures – 'techniques used to identify a specific illness or medical condition'

definition found in the (health & social care level 3, Pearson BTEC national, student book 2) Each illness will require different diagnostic techniques to identify what type of disability an individual has.

Case study one, Rebecca brown (child study) :

Rebecca is an 8-year-old girl who has severe disability that has stopped her from moving her body beyond her spine. The main reason she lacks the capacity to do so is due to a traffic collision, and her condition will not improve over time given the severity of it. Rebecca also needs extensive assistance
