FORMULA SHEET

Distance formula:

$$AB = \sqrt{(x_B - x_A)^2 + (y_B - y_A)^2}$$

Midpoint formula:

$$M(x_M; y_M) = \left(\frac{x_A + x_B}{2}; \frac{y_A + y_B}{2} \right)$$

Gradient formula:

$$AB = \frac{y_B - y_A}{x_B - x_A}$$

Question 1:

In the diagram below $A(1; 6)$, $B(3; -2)$ and $C(-7; k)$ are three points in a plane with $AB \perp AC$.

- 1.1 Determine the midpoint of AB .
- 1.2 Calculate the gradient of AB .
- 1.3 Hence write down the gradient of AC .
- 1.4 Determine the value of k .

Zill,1985 Relativistic Electrodynamics and Differential Geometry Stephen Parrott,2012-12-06 The aim of this book is to provide a short but complete exposition of the logical structure of classical relativistic electrodynamics written in the language and spirit of coordinate free differential geometry The intended audience is primarily mathematicians who want a bare bones account of the foundations of electrodynamics written in language with which they are familiar and secondarily physicists who may be curious how their old friend looks in the new clothes of the differential geometric viewpoint which in recent years has become an important

language and tool for theoretical physics This work is not intended to be a textbook in electrodynamics in the usual sense in particular no applications are treated and the focus is exclusively the equations of motion of charged particles Rather it is hoped that it may serve as a bridge between mathematics and physics Many non physicists are surprised to learn that the correct equation to describe the motion of a classical charged particle is still a matter of some controversy The most mentioned candidate is the Lorentz Dirac equation However it is experimentally unverified is known to have no physically reasonable solutions in certain circumstances and its usual derivations raise serious foundational issues Such difficulties are not extensively discussed in most electrodynamics texts which quite naturally are oriented toward applying the well verified part of the subject to concrete problems

An Introduction to Coordinate Geometry Alan Barton, 1958 Principles of Engineering Mechanics Millard F. Beatty, 2010-06-01 Separation of the elements of classical mechanics into kinematics and dynamics is an uncommon tutorial approach but the author uses it to advantage in this two volume set Students gain a mastery of kinematics first a solid foundation for the later study of the free body formulation of the dynamics problem A key objective of these volumes which present a vector treatment of the principles of mechanics is to help the student gain confidence in transforming problems into appropriate mathematical language that may be manipulated to give useful physical conclusions or specific numerical results In the first volume the elements of vector calculus and the matrix algebra are reviewed in appendices Unusual mathematical topics such as singularity functions and some elements of tensor analysis are introduced within the text A logical and systematic building of well known kinematic concepts theorems and formulas illustrated by examples and problems is presented offering insights into both fundamentals and applications Problems amplify the material and pave the way for advanced study of topics in mechanical design analysis advanced kinematics of mechanisms and analytical dynamics mechanical vibrations and controls and continuum mechanics of solids and fluids Volume I of Principles of Engineering Mechanics provides the basis for a stimulating and rewarding one term course for advanced undergraduate and first year graduate students specializing in mechanics engineering science engineering physics applied mathematics materials science and mechanical aerospace and civil engineering Professionals working in related fields of applied mathematics will find it a practical review and a quick reference for questions involving basic kinematics
