

# Anatomy of the Respiratory System

## Respiration

Respiration is the act of breathing:

- **Inhaling.** The act of breathing in oxygen.
- **Exhaling.** The act of breathing out carbon dioxide.

## Respiratory system

The respiratory system is made up of the organs included in the exchange of oxygen and carbon dioxide. These are the parts:

- Nose
- Mouth
- Throat (pharynx)
- Voice box (larynx)
- Windpipe (trachea)
- Large airways (bronchi)
- Lungs

The **upper respiratory** tract is made up of the:

- Nose
- Nasal cavity
- Sinuses
- Larynx
- Trachea

The **lower respiratory** tract is made up of the:

- Lungs
- Bronchi and bronchioles
- Air sacs (alveoli)

## Lungs

The lungs take in oxygen. The cells of your body's cells need oxygen to live and carry out their normal functions. The lungs also get rid of carbon dioxide, a waste product of the cells.

The lungs are a pair of cone-shaped organs made up of spongy, pinkish-gray tissue. They take up most of the space in the chest (thorax).

The lungs are surrounded by a membrane (pleura).

The lungs are separated from each other by the mediastinum, an area that contains the:

- Heart and its large vessels
- Trachea
- Esophagus
- Thymus gland
- Lymph nodes

The right lung has 3 sections, called lobes. The left lung has 2 lobes. When you breathe:

- Air enters your body through your nose or mouth.
- Air then travels down the throat through the larynx and trachea.
- Air goes into the lungs through tubes called main-stem bronchi. One main-stem bronchus leads to the right lung and one to the left lung:
- In the lungs, the main-stem bronchi divide into smaller bronchi.
- The smaller bronchi divide into even smaller tubes (bronchioles).
- Bronchioles end in tiny air sacs (alveoli) where the exchange of oxygen and carbon dioxide occurs.
