Materials for Energy Efficiency and Thermal Comfort in Buildings Matthew R Hall, 2010-04-21 Almost half of the total energy produced in the developed world is inefficiently used to heat cool ventilate and control humidity in buildings to meet the increasingly high thermal comfort levels demanded by occupants The utilisation of advanced materials and passive technologies in buildings would substantially reduce the energy demand and improve the environmental impact and carbon footprint of building stock worldwide Materials for energy efficiency and thermal comfort in buildings critically reviews the advanced building materials applicable for improving the built environment Part one reviews both fundamental building physics and occupant comfort in buildings from heat and mass transport hygrothermal behaviour and ventilation on to thermal comfort and health and safety requirements Part two details the development of advanced materials and sustainable technologies for application in buildings beginning with a review of lifecycle assessment and environmental profiling of materials The section moves on to review thermal insulation materials materials for heat and moisture control and heat energy storage and passive cooling technologies Part

two concludes with coverage of modern methods of construction roofing design and technology and benchmarking of fa ades for optimised building thermal performance Finally Part three reviews the application of advanced materials design and technologies in a range of existing and new building types including domestic commercial and high performance buildings and buildings in hot and tropical climates This book is of particular use to mechanical electrical and HVAC engineers architects and low energy building practitioners worldwide as well as to academics and researchers in the fields of building physics civil and building engineering and materials science Explores improving energy efficiency and thermal comfort through material selection and sustainable technologies Documents the development of advanced materials and sustainable technologies for applications in building design and construction Examines fundamental building physics and occupant comfort in buildings featuring heat and mass transport hygrothermal behaviour and ventilation **Architect's Pocket**

Book Jonathan Hetreed,Ann Ross,Charlotte Baden-Powell,2023-05-15 This handy pocket book brings together a wealth of useful information that architects need on a daily basis on site or in the studio It provides clear guidance and invaluable detail on a wide range of issues from planning policy through environmental design to complying with Building Regulations from structural and services matters to materials characteristics and detailing This sixth edition includes the updating of regulations standards and sources across a wide range of topics with a particular focus on sustainability issues Compact and easy to use the Architect s Pocket Book has sold well over 100 000 copies to the nation s architects architecture students designers and construction professionals who do not have an architectural background but need to understand the basics fast This is the famous little blue book that you can t afford to be without *Modern Methods of Construction and Innovative Materials* Arthur Lyons,2024-04-01 This new textbook has two main themes The first is Modern Methods of Construction MMC which is the off site manufacture of a wide spectrum of products ranging from whole buildings to be transported onto site down to smaller units or components for site integration The second theme describes the innovation and progress towards carbon zero by the major generators of CO2 in the construction industry namely cement steel and masonry The first section of the book describes and illustrates with photographs the major forms of Modern Methods of Construction These include fully completed 3D units panelised systems pods sub assemblies and on site MMC The section on Innovative Materials then describes a wide range of construction products which are entering into the built environment sector Some new entrants are variants on well established construction materials such as steel and concrete Materials such as these will remain major construction materials for the foreseeable future but their composition and manufacturing processes will inevitably have to change Timber also will remain a major construction material but sustainable sourcing is key and its utilisation as cross lamination timber CLT or as modified timber is rapidly developing As a result students and practitioners must familiarise themselves with these materials their composition and various uses The book goes on to describe variants of other traditional building products such as glass plastic and insulation which are undergoing major

developments leading towards enhanced environmental sustainability as well as many emergent materials some of which are likely to be significant in future Modern Methods of Construction and Innovative Materials is the only book combining these important elements of the future of the industry in an easy to read guide for students and new practitioners It is essential reading for anyone studying and working in the built environment be they architects construction managers surveyors or engineers

Basics Interior Design 01: Retail Design Lynne Mesher,2010-08-26 Retail Design Ecosystem Services Come To Town Gary Grant,2012-07-16 The need to find new approaches to the development of cities is becoming increasingly urgent in this age of continuing population growth demographic transition climate change fossil fuel peak and biodiversity losses Restoring ecosystem services and promoting biodiversity is essential to sustainable development even in the built environment Ecosystem Services come to Town greening cities by working with nature demonstrates how to make urban environments greener It starts by explaining how by mimicking nature and deliberately creating habitats to provide ecosystem services cities can become more efficient and more pleasant to live in The history of cities and city planning is covered with the impacts of industrial urban development described as well as the contemporary concerns of biodiversity loss peak oil and climate change The later sections offer solutions to the challenges of sustainable urban development by describing and explaining a whole range of approaches and interventions beginning at the regional scale with strategic green infrastructure looking at districts and precincts with trees parks and rain gardens and ending with single buildings including with green roofs and living walls Technical enough to be valuable to practitioners but still readable and inspirational this guide demonstrates to town planners urban designers architects engineers landscape architects how to make cities more liveable
