Zhang,2016-04-19 Nowadays energy crisis and global warming problems are hanging over everyone's head urging much research work on energy saving In the ICT industry which is becoming a major consumer of global energy triggered by the telecommunication network operators experiencing energy cost as a significant factor in profit calculations researchers have start *Wind Power* Paul Gipe,2004 Wind energy today is a booming worldwide industry The technology has truly come of

age with better more reliable machinery and a greater understanding of how and where wind power makes sense from the independent homestead to a grid connected utility wide perspective Heightened concerns about our environment mean that this resurgence of interest in wind a natural and widespread power source is here to stay Wind Power is the completely revised and expanded edition of Paul Gipes definitive 1993 book Wind Power for Home and Business In addition to expanded sections on gauging wind resources and siting wind turbines this edition includes new examples and case studies of successful wind systems international sources for new and used equipment and hundreds of color photographs and illustrations **Decision and Control in Hybrid Wind Farms** Harsh S. Dhiman,Dipankar Deb,2019-09-28 This book

focuses on two of the most important aspects of wind farm operation decisions and control The first part of the book deals with decision making processes and explains that hybrid wind farm operation is governed by a set of alternatives that the wind farm operator must choose from in order to achieve optimal delivery of wind power to the utility grid This decision making is accompanied by accurate forecasts of wind speed which must be known beforehand Errors in wind forecasting can be compensated for by pumping power from a reserve capacity to the grid using a battery energy storage system BESS Alternatives based on penalty cost are assessed using certain criteria and MCDM methods are used to evaluate the best choice Further considering the randomness in the dynamic phenomenon in wind farms a fuzzy MCDM approach is applied during the decision making process to evaluate the best alternative for hybrid wind farm operation Case studies from wind farms in the USA are presented together with numerical solutions to the problem In turn the second part deals with the control aspect and especially with yaw angle control which facilitates power maximization at wind farms A novel transfer function based methodology is presented that controls the wake center of the upstream turbine's lidar based numerical simulation is carried out for wind farm layouts and an adaptive control strategy is implemented to achieve the desired yaw angle for upstream turbines The proposed methodology is tested for two wind farm layouts Wake management is also implemented for hybrid wind farms where BESS life enhancement is studied The effect of yaw angle on the operational cost of BESS is assessed and case studies for wind farm datasets from the USA and Denmark are discussed Overall the book provides a comprehensive guide to decision and control aspects for hybrid wind farms which are particularly important from an industrial standpoint
