Romero,2012-11-03 Gamma ray astronomy has undergone an enormous progress in the last 15 years The success of satellite experiments like NASA s Comp ton Gamma Ray Observatory and ESA s INTEGRAL mission as well as of ground based instruments have open new views into the high energy Universe Different classes of cosmic gamma ray sources have been now detected at different energies in addition to young radio pulsars and gamma ray bursts the classical ones The new sources include radio quiet pulsars microquasars supernova remnants starburst galaxies ra dio galaxies flat spectrum radio quasars and BL Lacertae objects A large number of unidentified sources strongly suggests that this brief enumeration is far from complete Gamma ray bursts are now estab lished as extragalactic sources with tremendous energy output There is accumulating evidence supporting the idea that massive stars and star forming regions can accelerate charged particles up to relativistic ener gies making them gamma ray sources Gamma ray astronomy has also proved to be a powerful tool for cosmology imposing constraints to the background photon fields that can absorb the gamma ray flux from dis tant sources All this has profound implications for our current ideas about how particles are accelerated and transported in both the local and distant U niverse The evolution of our knowledge on the gamma ray sky has been so fast that is not easy for the non specialist scientist and the graduate student to be aware of the full potential of this field or to grasp the fundamentals of a given topic in order to attempt some original contribution      Hart's Annual Army List, Militia List, and Imperial Yeomanry List ,1910      *The Navy List* Great Britain. as a major threat to public health in both the western and developing world Essentially a disorder of energy balance obesity occurs when energy intake and storage exceeds expenditure Much of energy homeostasis depends on the activity and function of adipose tissue Adipocytes in mammals fall into two categories classified by their primary functions white fat cells that mediate energy storage and thermogenic fat cells that counteract hypothermia and obesity through adaptive thermogenesis Whereas white fat and its function as an energy reservoir and endocrine organ have been studied for decades and are relatively well understood until recently many aspects of the thermogenic fat biology have remained elusive Accumulating evidence supports the hypothesis that thermogenic fat cells arise from at least two different developmental origins the ones of a skeletal muscle like lineage are now called classical brown fat cells and the rest of the thermogenic fat cells are normally referred to as the beige fat cells The last decade has witnessed an explosion of interest and studies focusing on the regulation of thermogenic fat cells and potential therapeutics targeting these adipocytes Here we summarize the recent advancements in our understanding of these metabolically active fat cells
