Etymological Dictionary of Egyptian, Volume 2 Gábor Takács, 2021-10-01 The multi volume Etymological Dictionary of Egyptian by Gábor Takács promises to open a new chapter in Egyptian and Afro Asiatic comparative linguistics. A Dolgopolsky in Israel Oriental Studies. The amount of material offered the extensive treatment of scholarly discussions on each item and the insights into the connections of Egyptian and the related Afro Asiatic Semito Hamitic languages including many new lexical parallels will make it an indispensable tool for comparative purposes and an unchallenged starting point for every linguist in the field. This second volume is in fact the first volume of the very etymological dictionary. It comprises the Egyptian words with initial b, p and f. The reader will find the etymological entries even more detailed than those of the introductory volume due to the full retrospective presentation of all etymologies proposed since A. Erman's time and thanks to an extremely detailed discussion of all possible relevant data even on the less known Afro Asiatic cognates to the Egyptian roots.

Iterative Methods without Inversion Anatoly Galperin, 2016-11-17 Iterative Methods without Inversion presents the iterative methods for solving operator equations $fx = 0$ in Banach and/or Hilbert spaces. It covers methods that do not require inversions of f or solving linearized subproblems. The typical representatives of the class of methods discussed are Ulm's and Broyden's methods. Convergence analyses of the methods considered are based on Kantorovich's majorization principle which avoids unnecessary simplifying assumptions like differentiability of the operator or solvability of the equation. These analyses are carried out under a more general assumption about degree of continuity of the operator than traditional Lipschitz continuity, regular continuity. Key Features: The methods discussed are analyzed under the assumption of regular continuity of divided difference operator which is more general and more flexible than the traditional Lipschitz continuity. Attention is given to criteria for comparison of merits of various methods and to the related concept of optimality of a method of certain class. Many publications on methods for solving nonlinear operator equations discuss methods that involve inversion of linearization of the operator which task is highly problematic in infinite dimensions. Accessible for anyone with minimal exposure to nonlinear functional analysis.

Sustainable Interdependent Networks II M. Hadi Amini, Kianoosh G. Boroojeni, S. S. Iyengar, Panos M. Pardalos, Frede Blaabjerg, Asad M. Madni, 2018-12-11 This book paves the way for researchers working on the sustainable interdependent networks spread over the fields of computer science, electrical engineering and smart infrastructures. It provides the readers with a comprehensive insight to understand an in-depth big picture of smart cities as a thorough example of interdependent large-scale networks in both theory and application aspects. The contributors specify the importance and position of the interdependent networks in the context of developing the sustainable smart cities and provide a comprehensive investigation of recently developed optimization methods for large-scale networks. There has been an emerging concern regarding the optimal operation of power and transportation networks. In the second volume of Sustainable Interdependent Networks book we focus on the interdependencies of these two

networks optimization methods to deal with the computational complexity of them and their role in future smart cities We further investigate other networks such as communication networks that indirectly affect the operation of power and transportation networks Our reliance on these networks as global platforms for sustainable development has led to the need for developing novel means to deal with arising issues The considerable scale of such networks due to the large number of buses in smart power grids and the increasing number of electric vehicles in transportation networks brings a large variety of computational complexity and optimization challenges Although the independent optimization of these networks lead to locally optimum operation points there is an exigent need to move towards obtaining the globally optimum operation point of such networks while satisfying the constraints of each network properly The book is suitable for senior undergraduate students graduate students interested in research in multidisciplinary areas related to future sustainable networks and the researchers working in the related areas It also covers the application of interdependent networks which makes it a perfect source of study for audience out of academia to obtain a general insight of interdependent networks

Aspects of Differential Geometry IV Esteban Calviño-Louzao,Eduardo García-Río,Peter Gilkey,JeongHyeong Park,Ramón Vázquez-Lorenzo,2022-06-01 Book IV continues the discussion begun in the first three volumes Although it is aimed at first year graduate students it is also intended to serve as a basic reference for people working in affine differential geometry It also should be accessible to undergraduates interested in affine differential geometry We are primarily concerned with the study of affine surfaces which are locally homogeneous We discuss affine gradient Ricci solitons affine Killing vector fields and geodesic completeness Opozda has classified the affine surface geometries which are locally homogeneous we follow her classification Up to isomorphism there are two simply connected Lie groups of dimension 2 The translation group R^2 is Abelian and the group $ax+b$ group is non Abelian The first chapter presents foundational material The second chapter deals with Type surfaces These are the left invariant affine geometries on R^2 Associating to each Type surface the space of solutions to the quasi Einstein equation corresponding to the eigenvalue 1 turns out to be a very powerful technique and plays a central role in our study as it links an analytic invariant with the underlying geometry of the surface The third chapter deals with Type surfaces these are the left invariant affine geometries on the group These geometries form a very rich family which is only partially understood The only remaining homogeneous geometry is that of the sphere S^2 The fourth chapter presents relations between the geometry of an affine surface and the geometry of the cotangent bundle equipped with the neutral signature metric of the modified Riemannian extension Electrical Principles and Technology for Engineering John Bird,2013-10-22 The aim of this book is to introduce students to the basic electrical and electronic principles needed by technicians in fields such as electrical engineering electronics and telecommunications The emphasis is on the practical aspects of the subject and the author has followed his usual successful formula incorporating many worked examples and problems answers supplied into the learning process Electrical Principles and Technology for Engineering is John Bird s core text for Further Education courses at BTEC levels N11 and N111 and Advanced GNVQ It is also designed to provide a comprehensive introduction for students on a variety of City Guilds courses and any students or technicians requiring a sound grounding in Electrical Principles and Electrical Power Technology **Partial Differential**
