Brian C. Satterlee, 2001-05-31 Many textbooks have been published in the academic field of study known as Strategic Management Some are written to meet the guidelines set forth by specialized accrediting agencies others to impart the results of research or scholarly activities Whatever the reason for publication all textbooks in this field of study cover its core concepts A core concept in a given academic discipline is one that is central to the field All scholars may not agree that it is correct yet it heavily influences their thinking through acceptance modification or rejection and is likely to stand the test of time The application of these concepts to the professional situations of the student is in a constant state of change How do business schools attempt to accommodate this constant state of change Current instructional practice in most business schools is to present the core concept via an established textbook and require students to demonstrate competency in the concept by conducting a case analysis or some other experiential activity The case study assignment requires the student to assess the situation as presented in the case consider this assessment in light of the core concepts studied and develop solutions for the case that are based on the core concepts In the end students learn to apply traditional textbook based concepts to traditional problems Yet as has been reported in the media the Internet has changed everything Has the Internet changed the relevancy of Strategic Management core concepts The assumption of this book is that the relevancy of the time tested core concepts has not changed What the Internet has changed is access to these core concepts It is now possible for anyone to learn the core concepts of Strategic Management or any other field of study via the Internet This real time access to information can be used to revolutionize the application of core concepts to the professional lives of those who learn them

The Quest for Professionalism Georges Romme,2016-01-29 Early pioneers in management thinking such as Henri Fayol and Peter Drucker conceived of management as a science based professional activity that serves the greater good Today however many organizations are managed by people demonstrating anything but professionalism resulting in mismanagement of risks as well as a one dimensional focus on short term results The key thesis in this book is that The Quest for Professionalism must be revitalized because the societal costs and damage caused by managerial amateurism are huge The book is about how to address this grand challenge for example by exploring whether and how a shared professional purpose and a professional body of knowledge can be developed While most work in this area has previously focused on management education The Quest for Professionalism adopts an inside out approach implying management scholarship is the driving force behind any intrinsic transformation of the profession at large Without management scholars playing an active role in advancing science based professionalism in the mould of engineering and medicine any attempt to professionalize management practice is doomed to fail Moreover Georges Romme demonstrates the professionalization quest has to move away from the idea of management being confined to a few people at the top toward management as a technology for distributing power and leadership throughout the organization
