

The External Anatomy of the Crayfish

Crayfish are freshwater crustaceans that belong to the Phylum Arthropoda (subphylum Crustacea). They are also known as crawfish, crawdads, and mudbugs. They can be found in freshwater streams or even in muddy ditches. They are **decapods**, meaning that they have five pairs of appendages and are related to crabs, shrimp, and lobsters. They have three distinct body regions: the head, thorax, and abdomen. The head and thorax are fused to form the cephalothorax. In this activity, you will examine the external anatomy of a freshwater crayfish.

Pre Lab Questions:

1. What are the three body regions of a crayfish?

2. What is a decapod?

3. What animals are related to the crayfish?

The Head - Place the crayfish ventral side up so the mouthparts can be observed.

Label the diagram as you locate structures using the abbreviations.

4. Locate the mandible, which are the jaws of the crayfish. Unlike mammals, these jaws move side to side. This structure should be hard and difficult to move.

5. The crayfish has three mouth appendages used for manipulating food, the maxillipeds. The largest of them is the 3rd maxilliped. The 2nd maxilliped is shorter and lies next to the 3rd.

The 1st maxilliped is located closest to the mandible.

6. Locate the two large antennae and the smaller antennules that branch from the base. The antennae are sense organs (touch, taste, equilibrium).

7. Flip the specimen to its dorsal side to locate the eyes, which extend from two stalks called pedicels.

Mandible (M) 1st Maxilliped (1) 2nd Maxilliped (2)
3rd Maxilliped (3) Antenna (A1) Antennule (A2)
