Hydrocarbons Alex Kimmons, 2021-05-14 HYDROCARBONS Chemistry is an interesting and fundamental branch of science because it gives us the chance to explain the secrets of nature What is water What do we use in our cars as fuel What is aspirin What are perfumes made of Many of these kinds of questions and their answers are all part of the world of chemistry There is no industry that does not depend upon chemical substances petroleum pharmaceuticals garment aircraft steel electronics agriculture etc This book helps everyone to understand nature However one does not need to be a chemist or scientist to understand the simplicity within the complexity around us The aim was to write a modern up to date book where students and teachers can get concise information about the structure of substances Sometimes reactions are given in the detailed form but in all excessive detail has been omitted The book is designed to introduce basic knowledge about chemical bonds Chemists work every day to produce new compounds to make our lives easier with the help of this basic knowledge In the design emphasis has been placed upon making the book student friendly Throughout the books colorful tables important reactions funny cartoons interesting extras and reading passages are used to help explain ideas This book will also show you how chemical bonds are useful to us in everyday life We hope after studying this book you will find chemistry in every part of your life

Chemistry of Hydrocarbon Combustion David. Hucknall, 2012-12-06 The scientific and economic importance of the high temperature reactions of hydrocarbons in both the presence and absence of oxygen cannot be overemphasized A vast chemical industry exists based on feedstocks produced by the controlled pyrolysis of hydrocarbons while uncontrolled combustion in air is still among the most important sources of heat and mechanical energy The detonation and explosion of hydrocarbon oxidant mixtures can however be a highly dangerous phenomenon which destroys lives and equipment In order that control can be exerted over combustion processes a complete description of hydrocarbon oxidation and pyrolysis is required A major contribution to this is an understanding of the unstable intermediates involved and their reactions The aim of this book is to review our knowledge of the chemistry of hydrocarbon combustion and to consider the data which are available for relevant reactions Chapter 1 describes early studies in which the apparent complexity of the chemistry was established and the type of information required for a better understanding was defined Experimental studies of the overall process which were carried out with the aim of establishing the sequence of stable chemical intermediates and some of the unstable species are described in Chapter 2 The limited nature of the information thus obtained showed that independent studies of individual reactions involving the unstable species were required In Chapter 3 investigations specifically aimed at the determination of the kinetics of elementary reactions are discussed
