Computational Electromagnetics and Its Applications
Thomas G. Campbell, Roy A. Nicolaides, Manuel D. Salas, 2012-12-06 This volume contains the proceedings of the first ICASE LaRC Workshop on Computational Electromagnetics and Its Applications conducted by the Institute for Computer Applications in Science and Engineering and NASA Langley Research Center. We had several goals in mind when we decided jointly with the Electromagnetics Research Branch to organize this workshop on Computational Electromagnetics (CEM). Among our goals were a desire to obtain an overview of the current state of CEM covering both algorithms and applications and their effect on NASA's activities in this area. In addition, we wanted to provide an attractive setting for computational scientists with expertise in other fields, especially computational fluid dynamics (CFD), to observe the algorithms and tools of CEM at work. Our expectation was that scientists from both fields would discover mutually beneficial interconnections and relationships. Another goal was to learn of progress in solution algorithms for electromagnetic optimization and design problems such as problems that make extensive use of field solvers and computational efficiency is at a premium. To achieve these goals, we assembled the renowned group of speakers from academia and industry whose talks are contained in this volume. The papers are printed in the same order in which the talks were presented at the meeting. The first paper is an overview of work currently being performed in the Electromagnetic Research Branch at the Langley Research Center.
