Wireless Communications The Ima Volumes In Mathematics And Its Applications:

Wireless Communications Prathima Agrawal, Matthew D. Andrews, Philip J. Fleming, G. George Yin, Lisa Zhang, 2010-05-05 This volume contains papers based on invited talks given at the 2005 IMA Summer Workshop on Wireless Communications held at the Institute for Mathematics and Its Applications University of Minnesota June 22 July 1 2005 It presents some of the highlights of the workshop and collects papers covering a broad spectrum of important and pressing issues in wireless communications

Cognitive Radio Networks Yang Xiao, Fei Hu, 2008-12-24 Fueled by ongoing and increasing consumer demand the explosive growth in spectrum based communications continues to tax the finite resources of the available spectrum One possible solution Cognitive Radio Network CRN allows unlicensed users opportunistic access to licensed bands without interfering with existing users Although some initial s

Software for Algebraic Geometry Michael E. Stillman, Nobuki Takayama, Jan Verschelde, 2008-05-29 Algorithms in algebraic geometry go hand in hand with software packages that implement them Together they have established the modern field of computational algebraic geometry which has come to play a major role in both theoretical advances and applications Over the past fifteen years several excellent general purpose packages for computations in algebraic geometry have been developed such as CoCoA Singular and Macaulay 2 While these packages evolve continuously incorporating new mathematical advances they both motivate and demand the creation of new mathematics and smarter algorithms This volume reflects the workshop Software for Algebraic Geometry held in the week from 23 to 27 October 2006 as the second workshop in the thematic year on Applications of Algebraic Geometry at the IMA The papers in this volume describe the software packages Bertini PHClab Gfan DEMiCs SYNAPS TrIm Gambit ApaTools and the application of Risa Asir to a conjecture on multiple zeta values They offer the reader a broad view of current trends in computational algebraic geometry through software development and applications

Convex Optimization in Signal Processing and Communications Daniel P. Palomar, Yonina C. Eldar, 2010 Over the past two decades there have been significant advances in the field of optimization In particular convex optimization has emerged as a powerful signal processing tool and the variety of applications continues to grow rapidly This book written by a team of leading experts sets out the theoretical underpinnings of the subject and provides tutorials on a wide range of convex optimization applications Emphasis throughout is on cutting edge research and on formulating problems in convex form making this an ideal textbook for advanced graduate courses and a useful self study guide Topics covered range from automatic code generation graphical models and gradient based algorithms for signal recovery to semidefinite programming SDP relaxation and radar waveform design via SDP It also includes blind source separation for image processing robust broadband beamforming distributed multi agent optimization for networked systems cognitive radio systems via game theory and the variational inequality approach for Nash equilibrium solutions

Topics in Stochastic Analysis and Nonparametric Estimation Pao-Liu Chow, Boris S. Mordukhovich, George Yin, 2007-11-13 To honor Rafail Z Khasminskii on

his seventy fifth birthday for his contributions to stochastic processes and nonparametric estimation theory an IMA participating institution conference entitled Conference on Asymptotic Analysis in Stochastic Processes Nonparametric Estimation and Related Problems was held This volume commemorates this special event Dedicated to Professor Khasminskii it consists of nine papers on various topics in probability and statistics **Stochastic-Process Limits** Ward

Whitt,2006-04-11 Stochastic Process Limits are useful and interesting because they generate simple approximations for complicated stochastic processes and also help explain the statistical regularity associated with a macroscopic view of uncertainty This book emphasizes the continuous mapping approach to obtain new stochastic process limits from previously established stochastic process limits The continuous mapping approach is applied to obtain heavy traffic stochastic process limits for queueing models including the case in which there are unmatched jumps in the limit process These heavy traffic limits generate simple approximations for complicated queueing processes and they reveal the impact of variability upon queueing performance The book will be of interest to researchers and graduate students working in the areas of probability stochastic processes and operations research In addition this book won the 2003 Lanchester Prize for the best contribution to Operation Research and Management in English see <http://www.informs.org/Prizes/LanchesterPrize.html> **Ultra Wideband**

Mohammad Abdul Matin,2012-10-03 Ultra wideband UWB has advanced and merged as a technology and many more people are aware of the potential for this exciting technology The current UWB field is changing rapidly with new techniques and ideas where several issues are involved in developing the systems Among UWB system design the UWB RF transceiver and UWB antenna are the key components Recently a considerable amount of researches has been devoted to the development of the UWB RF transceiver and antenna for its enabling high data transmission rates and low power consumption Our book attempts to present current and emerging trends in research and development of UWB systems as well as future expectations **Natural Locomotion in Fluids and on Surfaces** Stephen Childress,Anette Hosoi,William W. Schultz,Jane

Wang,2012-08-14 This volume developed from a Workshop on Natural Locomotion in Fluids and on Surfaces Swimming Flying and Sliding which was held at the Institute for Mathematics and its Applications IMA at the University of Minnesota from June 1 5 2010 The subject matter ranged widely from observational data to theoretical mechanics and reflected the broad scope of the workshop In both the prepared presentations and in the informal discussions the workshop engaged exchanges across disciplines and invited a lively interaction between modelers and observers The articles in this volume were invited and fully refereed They provide a representative if necessarily incomplete account of the field of natural locomotion during a period of rapid growth and expansion The papers presented at the workshop and the contributions to the present volume can be roughly divided into those pertaining to swimming on the scale of marine organisms swimming of microorganisms at low Reynolds numbers animal flight and sliding and other related examples of locomotion **Symmetric**

Functionals on Random Matrices and Random Matchings Problems Grzegorz Rempala,Jacek Wesolowski,2007-12-06

This IMA Volume in Mathematics and its Applications SYMMETRIC FUNCTIONALS ON RANDOM MATRICES AND RANDOM MATCHINGS PROBLEMS During the academic year 2003 2004 the Institute for Mathematics and its Applications IMA held a thematic program on Probability and Statistics in Complex Systems The program focused on large complex systems in which stochasticity plays a significant role Such systems are very diverse and the IMA program emphasized systems as varied as the human genome the internet and world financial markets Although quite different these systems have features in common such as multitudes of interconnecting parts and the availability of large amounts of high dimensional noisy data The program emphasized the development and application of common mathematical and computational techniques to model and analyze such systems About 1 000 mathematicians statisticians scientists and engineers participated in the IMA thematic program including about 50 who were in residence at the IMA during much or all of the year The present volume was born during the 2003 2004 thematic program at the IMA The two authors were visitors to the IMA during the program year with the first author resident for the entire ten months This volume is a result of the authors' interactions at the IMA and especially their discussions with the many other program participants in the program and their involvement in the numerous tutorials workshops and seminars held during the year
