The Malay Archipelago: The Land of the

Orang-utan and the Bird of Paradise; A Narrative of Travel with Studies of Man and Nature (Complete) Alfred

Russel Wallace, 2020-09-28 From a look at a globe or a map of the Eastern hemisphere we shall perceive between Asia and Australia a number of large and small islands forming a connected group distinct from those great masses of land and having little connection with either of them Situated upon the Equator and bathed by the tepid water of the great tropical oceans this region enjoys a climate more uniformly hot and moist than almost any other part of the globe and teems with natural productions which are elsewhere unknown The richest of fruits and the most precious of spices are Indigenous here It produces the giant flowers of the Rafflesia the great green winged Ornithoptera princes among the butterfly tribes the man like Orangutan and the gorgeous Birds of Paradise It is inhabited by a peculiar and interesting race of mankind the Malay found nowhere beyond the limits of this insular tract which has hence been named the Malay Archipelago To the ordinary Englishman this is perhaps the least known part of the globe Our possessions in it are few and scanty scarcely any of our travellers go to explore it and in many collections of maps it is almost ignored being divided between Asia and the Pacific Islands It thus happens that few persons realize that as a whole it is comparable with the primary divisions of the globe and that some of its separate islands are larger than France or the Austrian Empire The traveller however soon acquires different ideas He sails for days or even weeks along the shores of one of these great islands often so great that its inhabitants believe it to be a vast continent He finds that voyages among these islands are commonly reckoned by weeks and months and that their several inhabitants are often as little known to each other as are the native races of the northern to those of the southern continent of America He soon comes to look upon this region as one apart from the rest of the world with its own races of men and its own aspects of nature with its own ideas feelings customs and modes of speech and with a climate vegetation and animated life altogether peculiar to itself From many points of view these islands form one compact geographical whole and as such they have always been treated by travellers and men of science but a more careful and detailed study of them under various aspects reveals the unexpected fact that they are divisible into two portions nearly equal in extent which differ widely in their natural products and really form two parts of the primary divisions of the earth I have been able to prove this in considerable detail by my observations on the natural history of the various parts of the Archipelago and as in the description of my travels and residence in the several islands I shall have to refer continually to this view and adduce facts in support of it I have thought it advisable to commence with a general sketch of the main features of the Malayan region as will render the facts hereafter brought forward more interesting and their bearing upon the general question more easily understood I proceed therefore to sketch the limits and extent of the Archipelago and to point out the more striking features of its geology physical geography vegetation and animal life

hero and find the courage to stand up to the bullies himself Learning and Memory David A. Lieberman, 2011-12-08 This innovative textbook is the first to integrate learning and memory behaviour and cognition It focuses on fascinating human research in both memory and learning while also bringing in important animal studies and brings the reader up to date with the latest developments in the subject Students are encouraged to think critically key theories and issues are looked at in detail descriptions of experiments include why they were done and how examining the method can help evaluate competing viewpoints By looking at underlying cognitive processes students come away with a sense of learning and memory being interrelated actions taken by the same human being rather than two separate activities Lively and engaging writing is supported by lots of examples of practical applications that show the relevance of lab based research to everyday life Examples include treatments for phobias and autism ways to improve eyewitness testimony and methods of enhancing study techniques The Wilson Bulletin ,1926 **Cognitive Science and the New Testament** István Czachesz, 2017 Over the last few decades our knowledge of how the human mind and brain works increased dramatically The field of cognitive science enables us to understand religious traditions rituals and visionary experiences in novel ways This has implications for the study of the New Testament and early Christianity How people in the ancient Mediterranean world remembered sayings and stories what they experienced when participating in rituals how they thought about magic and miracle and how they felt and reasoned about moral questions all of that can be now better understood with the help of insights from cognitive science Istvan Czachesz argues that the field of New Testament Studies witnesses the beginning of a cognitive turn He surveys relevant developments in the Cognitive Science of Religion and explores the field of cognitive and behavioral sciences in search of opportunities of gaining new insights about biblical materials Czachesz presents some methodological tools and initial steps together with a large number of examples of applying the cognitive approach to the New Testament and related ancient literature **Magic in the Ancient Eastern Mediterranean** Nina Nikki, Kirsi M.J. Valkama, 2020-12-14 Magic in the Ancient Eastern Mediterranean Cognitive Historical and Material Perspectives brings together articles with the shared conviction that the category of magic remains useful in religious studies and provides new insights to biblical and related texts and artifacts Historically magic has been considered in both scholarly and popular discourse to be questionable obscure and potentially subversive 19th century scholars of religion viewed magical beliefs and practices as primitive and inferior compared to Judeo Christian forms of worship which were considered true religion More recently the category has been defended especially by scholars of the cognitive science of religion who find it useful for delineating a set of beliefs and practices fundamental to all forms of religion The volume joins current scholarship in refraining from using the concept as an othering device and in arguing that it can still serve as a helpful analytical tool In addition to analyzing the discourse on magic in both ancient literature and modern scholarship the articles provide individual examples of how literary and material culture attest to the existence of magical beliefs and practices in sources from the Ancient Near East to the Byzantine Period

The book is divided into three parts. The contributions in the first part approach magic from the theoretical perspective of cognitive studies, ritual studies, and cultural evolution, while the rest of the book focuses on how magic and magicians are understood in ancient sources. The second part discusses a specific set of textual material dealing with blessings and curses. The third part of the volume discusses the world of various destructive celestial beings from which one and one's loved ones had to be defended, as well as the multitude of protective beings such as angels.
