Fill in the correct vocabulary term to the left. Add an example below the provided definition.

New Vocabulary	Definitions
Stabilizing selection	allele frequencies remain the same unless acted upon by a factor. Also known as genetic equilibrium Example:
Sexual selection	change in the allele frequencies in a population by chance Example:
Bottleneck	random evolution that occurs in a small, separate subpopulation Example:
Founder effect	process of a large population declining in number then rebounding to a large number again Example:
	selection which removes organisms with extreme expressions of a trait  The graph shows a bell-shaped curve representing a population's trait distribution. A dashed line represents the 'Original population' and a solid line represents the 'Population after selection'. Two arrows point down at the extreme ends of the curve, labeled 'Selection against both extremes'. The solid line is narrower and taller than the dashed line, indicating that extreme traits are being removed. Example:
	selection which shifts a population toward an extreme trait  The graph shows a bell-shaped curve representing a population's trait distribution. A dashed line represents the 'Original population' and a solid line represents the 'Population after selection'. An arrow points down on the left side of the curve, labeled 'Selection against one extreme'. The solid line is shifted to the right and is taller than the dashed line, indicating that the population is moving toward a higher trait value. Example:
