learning and thinking styles are not abilities but rather preferences in the use of abilities. Traditionally many psychologists and educators have believed that people's successes and failures are attributable mainly to individual differences in abilities. However, for the past few decades, research on the roles of thinking, learning, and cognitive styles in performance within both academic and nonacademic settings has indicated that they account for individual differences in performance that go well beyond abilities. New theories better differentiate styles from abilities and make more contact with other psychological literatures. Recent research in many cases is more careful and conclusive than are some of the older studies. Cognitive learning and thinking styles are of interest to educators because they predict academic performance in ways that go beyond abilities and because taking styles into account can help teachers to improve both instruction and assessment and to show sensitivity to cultural and individual diversity among learners. They are also of interest in business where instruments to assess styles are valuable in selecting and placing personnel. The state of the art research and theory in this volume will be of particular interest to scholars and graduate students in cognitive and educational psychology, managers and others concerned with intellectual styles as applied in educational, industrial, and corporate settings.

Psychology: First Canadian Edition Study Guide Richard O. Straub, 2006-09-15 Following the text's content, Richard Straub offers a Chapter Overview and Chapter Review which is divided by major section. Each group of fill-in-the-blank and short-answer questions is preceded by the relevant objective from the text. The Study Guide also includes three self-tests, one of which encourages students to think critically about the chapter's concepts, answers with page references for the self-tests and explanations of why a choice is correct or incorrect, and a Focus on Language and Vocabulary section which explains idioms and other phrases used by David Myers in the text that may not be clear to some readers.

The Malleability of Intellectual Styles Li-fang Zhang, 2013-09-09 Intellectual styles are individuals' preferred ways of using the abilities that they possess. The extent to which one can change his or her intellectual style is a question of interest to both researchers and the general public. This book presents the first comprehensive and systematic review of existing research on the malleability of intellectual styles. By critically analyzing research findings derived from both cross-sectional and longitudinal investigations performed over the past seven decades, Li-fang Zhang demonstrates that intellectual styles can be modified through both socialization and purposeful training. Professor Zhang elucidates the heuristic value of these findings for the development of adaptive intellectual styles in both academic and non-academic settings. She proposes further avenues of research that might advance scholarly understanding of the nature of and the potential for modifying intellectual styles.
