

Experiment 4: Standardization of Sodium Thiosulfate Solution

Introduction

In the first experiment, we performed a gravimetric analysis experiment by measuring the mass of a precipitate. In this experiment, we will be performing a volumetric analysis in which we will determine the amount of a constituent by measuring the volume of a reagent. In a volumetric analysis, it is necessary to have a solution of known concentration (also known as standard solution) reacting with a sample of unknown concentration to determine the unknown concentration. Such a technique is called titration.

A standard solution may be prepared by the simple procedure of taking a known amount of solid and diluting it to make a definite volume of the solution; in this case, the term primary standard solution is applied. Alternatively, it is very often the case that a direct measurement of the amount of material cannot be made, or is very difficult to make accurately. Such examples could be if the sample is a gas, a volatile liquid, a solid that is hygroscopic (has a tendency to absorb water and dissolve) or a solid that is efflorescent (has a tendency to lose water from its molecular structure). In this case, a solution must be made up with approximately the required concentration and the actual concentration must be determined by titration with a primary standard solution. The term secondary standard solution is applied in this latter instance. Hence:

- A primary standard solution is prepared by direct measurements of the mass of solute and the volume of solution.
- A secondary standard solution is a solution whose concentration cannot be determined directly from the weight of solute and volume of solution; the concentration must be determined by analysis of the solution itself.

Sodium thiosulfate crystals have the formula $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ when freshly crystallized, but the salt tends to effloresce (dehydrate) some of its water of crystallization (a property that is increased in very dry areas). Since the true formula for the crystals changes over time, we cannot weigh the sample and divide by the molar mass to determine moles present. This is why sodium thiosulfate cannot be used as a primary standard. A solution of thiosulfate is prepared with approximately the desired concentration and then standardized with a primary standard solution such as potassium iodate. The process of determining the concentration of the secondary standard solution by titration is called 'standardization'.

I & EC, 1925 *Laboratory Manual of Medicinal Chemistry III*
Dr. Niranjana S. Mahajan, Dr. Shrinivas D. Joshi, Dr. T. Prabha, Mr. Shrikrishna S. Maske, We are very pleased to put forth the Laboratory Manual of Medicinal Chemistry III. This manual is prepared as per PCI B Pharm course regulations 2014 and is divided into three sections for laboratory techniques, determination of oil values, and preparations of organic compounds. The methods of all the experiments are added from the recent research papers so that the advancement in the methods or apparatus can be addressed. This manual is designed for outcome-based education, and each experiment is arranged in a uniform way such as practical significance, practical outcomes, PrOs, and its mapping with course outcomes, theory resources used, procedure, precautions, observations, result, conclusion, references, and synopsis questions. Each experiment offers an opportunity to perform practical work, allowing students to gain proficiency in effectively managing equipment, handling glassware, chemicals, and reagents, and writing analytical reports. In addition, questions are provided at the end of the experiments to enhance students' knowledge, which will be beneficial for them as they pursue higher studies. During the laboratory period, you will have to multitask while you are doing the experiment. It is essential to document properly what you do and what you observe while doing the practical. Always plan your work ahead and think about what you are doing, why you are doing it, what is happening, and what you can conclude from your experiment. We acknowledge the help and co-operation extended by various persons in bringing out this manual. We are highly indebted to the authors of various books and articles mentioned in the reference, which became a major source of information for writing this manual. We also

thank the publishers designers and printers who graciously worked hard to publish this manual in time We hope that this manual will assist students in understanding concepts principles and performing procedures We wish you all the best
