**Public-Private Partnership** Remo Dalla Longa, 2011-03-31 **Urban Infrastructure** Remo Dalla Longa, 2023-03-01 The book deals with the concept of urban infrastructure and the strong evolution of globalization in particular the driving force taken by global cities Urban infrastructure is a constituent part of the global cities both have a synergistic evolution The main reference is to western global cities in the intertwining of financialization settling and brownfield which is a little different from the urbanization of other global cities of other non developed countries or emerging countries There is therefore a significant link between globalization and urban infrastructure The occurrence of slowbalization can have consequences on urban areas infrastructures and more generally on the different dichotomy between global city and nation With the pandemic infectious and the post COVID there is already a different configuration between the global city and the rest of the national territory A driving element of the urban infrastructure and the global city has been the financialization and identification of assets within global cities Urban infrastructure as an asset has grown considerably in the last two decades in the wake of what has already been highlighted previously for real estate There are contiguous issues that affect the concept of urban infrastructures and they are the enormous growth of finance and the landings of this in the great cities of the world with investments that first involved Real Estate and then urban infrastructures There has also been a technological revolution that has merged the ubiquitous technological infrastructure with other more traditional components of the infrastructure even apparently recent themes such as smart cities come from this evolutionary trend and merge with urban infrastructures The theme of smart cities if properly interpreted gives strength to the concept of urban infrastructure

**Public-Private Partnerships in Urban Bus Systems** Alejandro Hoyos Guerrero, Abel Lopez Dodero, 2021-06-25 Many cities have sought to replicate the urban bus public private partnership PPP structures that succeeded at the beginning of the millennia such as those implemented in Brazil Colombia and Mexico These cities improved their public transportation systems in the face of rapid urbanization rising air pollution and increasing road safety incidents through these PPP

interventions Examining these past international experiences and others Public Private Partnerships in Urban Bus Systems An Analytical Framework for Project Identification and Preparation first challenges the assumption that PPP structures are always the optimal approach for improving urban bus systems The authors use relevant case studies to demonstrate that structuring such PPPs in cities in the developing world requires tailor made interventions that respond to local contexts The authors identify essential elements for PPP feasibility and invite readers to consider alternative solutions for achieving the desired objectives This book presents an analytical framework that public transportation practitioners can use to support the process of identifying and preparing appropriate technical financial and legal structures to improve urban mobility if a PPP is the preferred solution It follows a detailed risk based approach to thoroughly analyze the challenges that might be experienced by cities that pursue private participation in proposed urban bus interventions Using specific examples the authors thoroughly analyze the risks and the specific potential planning stage challenges likely to be encountered and suggest strategies for practitioners to respond to the local contexts and the various alternative solutions This study builds upon international experiences predominantly in Latin America and in PPPs focused on streamlining fleet provision and operation Finally the book helps to identify and define bankable project structures that could respond well to local contexts and minimize risks

### **Public Private Partnerships for Urban Water Utilities**

Philippe Marin,2009-09-22 Public Private Partnerships for Urban Water Utilities A Review of Experiences in Developing Countries analyzes the market growth of Public Private Partnerships PPPs in the developing world since 1990 and the performance of more than 65 large water PPP projects representing more than 100 million people for access service quality operational efficiency and tariff levels Although a relatively small portion of the water utilities in the developing world are operated under PPPs about 7 percent in 2007 the urban population served by private water operators has grown every year since 1990 Despite many difficulties encountered by PPP projects and a few contract terminations a large majority of contracts awarded since 1990 are still in place The track record for improving service and efficiency reaffirms the value of PPPs to help turn around poorly performing water utilities even though the level of private financing did not match initial expectations Over time a more realistic market has developed the number of private investors from developing countries has grown and contract designs have become more pragmatic concerning risk allocations between partners The water sector has many features that set it apart from other infrastructure sectors This book suggests the need for careful consideration of those specificities to successfully involve private operators Although concessions with private financing have worked in a few places contractual arrangements that combine private operation with public financing appear to be the most sustainable option in many countries Policy makers stakeholders and donors need to remain heavily engaged in the water sector especially in the poorest countries and during a global financial crisis This book contributes to a better understanding of the various options to tackle the many challenges of providing water and sanitation services to urban populations in the developing world

*Planning and Design for Sustainable Urban Mobility* Un-Habitat, 2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change      *Effective Supply Mechanism of Urban Public Goods* Baijun Wu, Maogang Tang, Zhen Li, 2025-03-17 This book meticulously elaborates on the theory of public goods supply delving into government supply market private supply voluntary supply and multi stakeholder cooperative supply mechanisms It conducts a comparative analysis of public goods supply and supply mechanism reforms across various countries Not only does the book establish a model illustrating the relationship between public goods supply and economic growth but it also examines the historical evolution of China's urban public goods supply mechanism reform specifically within Chinese cities Through this work the book distills the unique characteristics of China's urban public goods provision and uncovers the underlying issues and influential factors in public goods supply Additionally it explores the evolutionary trajectory of urban public infrastructure and public services analyzing supply mechanisms and performance Ultimately the book delves into the policies governing urban public goods supply analyzing the decision making mechanisms and influencing factors of these policies and offering insightful suggestions for ensuring the effective supply of urban public goods in China      **Journal of Contemporary Urban Affairs Vol.5 No. 1., 2021** Aysel Yavuz, Dr., Nihan
