Surface Force Training Manual United States. Navy. Atlantic Fleet. Surface Force, United States. Navy. Pacific Fleet. Surface Force, 1996 **Impacts of the Fleet Response Plan on Surface Combatant Maintenance** Roland J.

Yardley, 2006 To achieve a more responsive and more readily deployable fleet of surface combatants the Navy adopted the Fleet Response Plan FRP in 2003 to replace its traditional ship maintenance and readiness cycle The goal of the FRP is to have non deployed ships achieve a high level of readiness earlier and to maintain high readiness longer so that they can deploy on short notice However a challenge of implementing the FRP is establishing the processes and procedures as well as a ready industrial base to facilitate maintenance planning and execution to meet the now unpredictable FRP surge requirements and maintenance demands By concentrating specifically on the DDG 51 class of destroyers the authors of this report look at the effects the FRP has had thus far and determine whether maintenance resources are meeting maintenance demands and whether related industry resources have been coordinated effectively Overall the authors determine that the initiative appears to have promising effects but that more time will be needed to assess maintenance supply and demand apart from the increase of funding tied to military operations post September 11 2001 United States Navy Aviation

Mechanics' Training System for Engine Maintenance Force United States Navy Gas Engine School, New York, 1920 **An Examination of Options to Reduce Underway Training Days Through the Use of Simulation** Roland J. Yardley, 2008 U S Navy surface combatant ship crew training involves a combination of shore based onboard pier side and underway training Underway training is expensive however and it increases wear and tear on operating equipment Furthermore constrained budgets and increasing recapitalization costs have forced the Navy to examine various methods such as increased use of simulators to reduce the annual operating costs of the fleet Technological improvements have increased the fidelity and realism of simulators and simulation is being used more widely for training within the U S Navy in other navies and in commercial shipping companies Although the Navy's surface combatant community currently uses simulators in its training regimen an increased use of simulation could potentially improve training efficiency sustain training readiness and reduce underway days Focusing on the DDG 51 Arleigh Burke class of surface combatants RAND examines the training requirements of surface forces determines where credit is granted for the use of simulation estimates what training is done underway examines simulation technology and identifies areas where simulation could be substituted for underway training without any decrease in readiness The authors find that although most exercises are done underway many could be done in port with or without the use of simulators Accordingly the Navy should consider 1 investing in shore based engineering simulators 2 directing that exercises that can be done in port be done in port and 3 accelerating the upgrades that are slowly providing DDG 51 class ships with an embedded engineering training capability publisher's website Proceedings of the United States Naval Institute United States Naval Institute, 1926 **Journal of the House of Representatives of the**
