Schippmann, 2013-09-05 USE FOR PRACTITIONER BUSINESS PIECES In an increasingly knowledge based economy a

company's success hinges on the quality of its people. People set strategy, make decisions, build relationships, and drive change. Businesses possess a powerful advantage if their people do their jobs better and faster than the competition. The need for more sophisticated, integrated, and strategically linked human resource applications (e.g., selection systems, training programs, and performance management interventions) is recasting the very role of HR. One of the critical tools in the HR professionals' toolkit that has been used to create these applications is job analysis. However, much of today's job analysis practice has failed to keep up with the evolutionary pace. This book is about a next-generation job analysis method that involves translating business strategies into work performance and competency requirements and using this information and data to create an architecture that can be used to support the sophisticated HR applications and enterprise resource planning systems that will be a part of high-performance, third-millennium organizations. Numerous case studies, applied examples, and project management tips contribute to the practice-oriented design of the book to illustrate a personnel research activity that is essentially an ongoing organizational development intervention. **USE THIS COPY FOR TEXTBOOK PIECES**
