HEALTHCARE's OUT SICK - PREDICTING A CURE - Solutions that WORK !!!! Gary D. Miner,Linda Miner,Darrell L. Dean,2019-01-04 The U S healthcare system is in complete chaos disarray Medical costs have increased significantly over the past 6 years with 70% increase for deductibles and 24% or more for health insurance premiums All the while workers earnings have either not increased or if they did the pay raises were for less than the increase in the cost of medical care The situation is unsustainable and the public wants the system fixed This book offers ways of fixing the problems in healthcare HEALTHCARE s OUT SICK PREDICTING A CURE Solutions that WORK first defines the healthcare in crisis problem Through real patient experiences the book describes the difficulties of getting through the maze of complexity among the plethora of silo providers which make up the industry The heart of the book provides readers with a comprehensive solution that can work a disruption that is necessary to provide Americans the medical care they need without the US public and healthcare providers and payors going into bankruptcy insolvency or closure This book delves into digitized medicine payor and provider reimbursement models and value based healthcare delivery It also includes a philosophy or mode of thinking and operation for the solutions that are needed for diagnosis effective cost effective and time efficient healthcare delivery of which digitized medicine value based care and payor reimbursement modes are just some of the factors The authors propose that the real solution involves having the patient at the center of the issues and changing from an archaic gold standard way of thinking to a Predictive Analytic thinking where one gets at the real truth by doing real science that in the end becomes effective not only for the population but for the individual person This all leads to real person centered and person directed medicine and healthcare delivery

Technocrime Stéphane Leman-Langlois, 2013-05-13 This book is concerned with the concept of technocrime. The term encompasses crimes committed on or with computers, the standard definition of cybercrime, but it goes well beyond this to convey the idea that technology enables an entirely new way of committing, combating, and thinking about criminality: criminals, police, courts, victims, and citizens. Technology offers, for example, not only new ways of combating crime but also new ways to look for, unveil, and label crimes and new ways to know, watch, prosecute, and punish criminals. Technocrime differs from books concerned more narrowly with cybercrime in taking an approach and understanding of the scope of technology's impact on crime and crime control. It uncovers mechanisms by which behaviours become crimes or cease to be called crimes. It identifies a number of corporate, government, and individual actors who are instrumental in this construction. And it looks at the beneficiaries of increased surveillance, control, and protection, as well as the targets of it. Chapters in the book cover specific technologies, e.g., the use of CCTV in various settings, computers, hackers, and security experts, photo radar, but have a wider objective to provide a comparative perspective and some broader theoretical foundations for thinking about crime and technology than have existed hitherto. This is a pioneering book which advances our understanding of the relationship between crime and technology, drawing upon the disciplines of criminology, political science, sociology, psychology, anthropology, surveillance studies, and cultural studies.

Innovative Technology-based Solutions for Primary, Secondary and Tertiary STEM Education Cristina Hava Muntean, Diana Bogusevschi, Gabriel-Miro Muntean, 2019-09-23 This book presents innovative technology-enhanced learning solutions for STEM education proposed by the EU Horizon 2020-funded NEWTON project, by first highlighting the benefits and limitations of existing research, work, e-learning systems, and case studies that embedded technology in the teaching and learning process. NEWTON's proposed innovative technologies and pedagogies include adaptive multimedia and multiple sensorial media, virtual reality, fabrication, and virtual labs, gamification, personalisation, game-based learning, and self-directed learning pedagogies. The main objectives are to encourage STEM education among younger generations and to attract students to STEM subjects, making these subjects more appealing and interesting. Real-life deployment of NEWTON technologies and developed educational materials in over 20 European educational institutions at primary, secondary, and tertiary levels demonstrated statistically significant increases in terms of learner satisfaction, learner motivation, and knowledge acquisition.
