Abstract This paper presents a mathematical model for the dynamics of a system of interacting agents. The model is based on the assumption that the agents are represented by a set of nodes, each of which is connected to a subset of the other nodes. The nodes are arranged in a hierarchical structure, with the root node at the top and the leaf nodes at the bottom. The model is used to study the dynamics of a system of interacting agents, such as a network of neurons or a social network. The model is shown to be able to capture the essential features of the system's dynamics, including the emergence of collective behavior and the formation of stable patterns of activity.
