

Tessellations

If you have ever walked on a tiled floor, you have seen a tessellation. In fact, the word *tessellate* comes from the Greek word for "four," because the original tile tessellation patterns were created using square (four-sided) tiles. These days, we use geometry to create interesting tile designs using tiles of varying numbers of sides.

To think about tessellations mathematically, imagine tiling a floor that is infinitely large and goes on forever. Instead of tiling the entire infinite plane you can describe a self-repeating tiling pattern, or a tessellation, that will cover the entire plane.

In this project, you will explore the types of tessellations that can be created using different types of polygons and applying transformations.

As you complete the task, keep these questions in mind:

What are tessellations and what are the different types? How can you use transformations to create tessellations?

In this task, you will apply what you have learned in this lesson to answer these questions.

Directions

Complete each of the following tasks, reading the directions carefully as you go. Be sure to show all work where indicated, including inserting images.

In addition to the answers you determine, you will be graded based on the work you show, or your solution process. So, be sure to show all your work and answer each question as you complete the tasks. Type your work into this document, or print the document and show work by hand, so you can submit it to your teacher for a grade.

Your teacher will give you further directions about how to submit your work. You may be asked to upload the document, e-mail it to your teacher, or print it and hand in a hard copy.

Now, let's get started!
