Student Exploration: Colligative Properties

Essential Question: How does a solute's presence affect a solution's boiling point, freezing point, and vapor pressure? What factors affect these colligative properties?

What Knowledge Do You Already Have About This Topic?

1. When the temperature is increasing, what happens to the particles? Why? (Colligative?)
2. Boiling point is the temperature at which a liquid's vapor pressure is equal to the external pressure.

3. Antifreeze is added to car radiators to prevent the water inside radiators from freezing and boiling. How do you think antifreeze affects the temperature at which water freezes? How about boiling? (Colligative?)

Antifreeze lowers the freezing point of water to get vehicles to get started in low temperatures when there's snow/ice and the antifreeze also helps the water in radiators the summer when it's really hot and prevents overheating of the engine during that time.

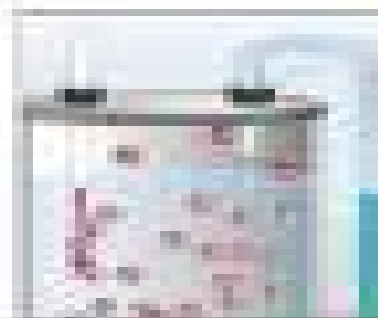

What Do You Think?

Adding a solute to a solvent causes the boiling point to increase, the freezing point to decrease, and the vapor pressure to decrease. (Colligative Properties)

How do these changes in boiling point, freezing point, and vapor pressure affect the solution?

4. What's the effect of the solute molecules on the liquid?

They lower the boiling point, raise the freezing point, and lower the vapor pressure.
