Posey, 2002 Offers advice on designing and implementing a software test automation infrastructure and identifies what current popular testing approaches can and cannot accomplish Rejecting the automation life cycle model the authors favor limited automation of unit integration and system testing They also present a control synchronized data driven framework to help jump start an automation project Examples are provided in the Rational suite test studio and source code is available at a supporting web site Annotation copyrighted by Book News Inc Portland OR

Population Biobank Studies: A Practical Guide Zhengming Chen, 2020-12-09 This book describes some of the key epidemiological principles scientific approaches and quality assurance frameworks required to design and conduct biobank studies in various settings Using examples from contemporary biobanks the book addresses the design features and practical procedures needed in order to launch and manage biobank studies including consent and regulatory approval the organisation of field work management of data and biological samples follow up and verification of disease outcomes development of IT systems for data collection quality assurance and study management Over the last two decades several large biobank studies have been initiated in different populations intended to greatly enhance the development of precision medicine Contemporary biobank studies are extremely large and complex and involve several decades of follow up Such studies pose major challenges in terms of ensuring rapid recruitment obtaining high quality data minimising loss to follow up reliably classifying disease outcomes and optimising the use of the biological samples collected In this regard the key to success lies not in planning the perfect study but in planning the most appropriate reliable sustainable and future proof study given the practical constraints of available resources time and capacity The authors of this handbook are epidemiologists clinicians software engineers and laboratory and data scientists with extensive experience in conducting large biobank studies The eight chapters can be read separately or together and provide readers with essential information on how to design implement and manage these studies The state of the art innovative and scalable approaches and methodologies presented here are intended to stimulate the development of further population based and hospital based biobank studies in diverse populations
