NEC Research & Development, 1980 The Art of Prolog Leon Sterling, Ehud Y. Shapiro, 1994 This second edition contains revised chapters taking into account recent research advances More advanced exercises have been included and Part II The Prolog Language has been modified to be compatible with the new Prolog standard This is a graduate level text that can be used for self study Fifth Generation Computer Systems 1984 , 1984 Resilient Asia Kazuhiko Takeuchi, Osamu Saito, Hirotaka Matsuda, Geetha Mohan, 2018-02-21 This book summarizes three years of extensive research conducted in Sri Lanka Indonesia and Vietnam as part of the CECAR Asia project which was intended to enhance resilience to climate and ecosystem changes by developing mosaic systems to strengthen resilience of bio production systems through the integration of large scale modern agriculture systems with traditional decentralized small scale systems The book starts with climate downscaling and impact assessment in rural Asia and then explores various adaptation options and measures by utilizing modern science and traditional knowledge including home garden systems and ancient irrigation systems The book subsequently examines the influence of climatic and ecological changes and the vulnerability of social economies from quantitative and qualitative standpoints applying econometric and statistical models in agriculture communities of Asia to do so The main goal of all chapters and case studies presented here is to identify the merits of applying organic methods to both commercial large scale production and traditional production to strengthen social resilience and promote sustainable development Especially at a time when modern agriculture systems are highly optimized but run the risk of failure due to changes in the climate and ecosystem this book offers viable approaches to developing an integrated framework of modern and traditional systems to enhance productivity and total system resilience as illustrated in various case studies *Snow Engineering 2000: Recent Advances and Developments* E. Hjorth-Hansen, 2017-10-19 This volume presents the background to the recently developed European standard CEN standard on snow loads Many of the papers on structural engineering describe results from a European snow project that was completed in 1999 **Geothermal Well Test Analysis** Sadiq J. Zarrouk, Katie McLean, 2019-04-30 Geothermal Well Test Analysis Fundamentals Applications and Advanced Techniques provides a comprehensive review of the geothermal pressure transient analysis methodology and its similarities and differences with petroleum and groundwater well test analysis Also discussed are the different tests undertaken in geothermal wells during completion testing output production testing and the interpretation of data In addition the book focuses on pressure transient analysis by numerical simulation and inverse methods also covering the familiar pressure derivative plot Finally non standard geothermal pressure transient behaviors are analyzed and interpreted by numerical techniques for cases beyond the limit of existing analytical techniques Provides a guide on the analysis of well test data in geothermal wells including pressure transient analysis completion testing and output testing Presents practical information on how to avoid common issues with data collection in geothermal wells Uses SI units converting existing equations and

models found in literature to this unit system instead of oilfield units *Proceedings of the International Conference on Earthquake Engineering and Structural Dynamics* Rajesh Rupakhety, Simon Olafsson, Bjarni Bessason, 2018-06-30 This book includes a collection of chapters that were presented at the International Conference on Earthquake Engineering and Structural Dynamics ICESD held in Reykjavik Iceland between 12-14 June 2017 The contributions address a wide spectrum of subjects related to wind engineering earthquake engineering and structural dynamics Dynamic behavior of ultra long span bridges that are discussed in this volume represent one of the most challenging and ambitious contemporary engineering projects Concepts principles and applications of earthquake engineering are presented in chapters addressing various aspects such as ground motion modelling hazard analysis structural analysis and identification design and detailing of structures risk due to non structural components and risk communication and mitigation The presented chapters represent the state of the art in these fields as well as the most recent developments *Advanced Nanoscale MOSFET Architectures* Kalyan Biswas, Angsuman Sarkar, 2024-05-29 Comprehensive reference on the fundamental principles and basic physics dictating metal oxide semiconductor field effect transistor MOSFET operation Advanced Nanoscale MOSFET Architectures provides an in depth review of modern metal oxide semiconductor field effect transistor MOSFET device technologies and advancements with information on their operation various architectures fabrication materials modeling and simulation methods circuit applications and other aspects related to nanoscale MOSFET technology The text begins with an introduction to the foundational technology before moving on to describe challenges associated with the scaling of nanoscale devices Other topics covered include device physics and operation strain engineering for highly scaled MOSFETs tunnel FET graphene based field effect transistors and more The text also compares silicon bulk and devices nanosheet transistors and introduces low power circuit design using advanced MOSFETs Additional topics covered include High k gate dielectrics and metal gate electrodes for multi gate MOSFETs covering gate stack processing and metal gate modification Strain engineering in 3D complementary metal oxide semiconductors CMOS and its scaling impact and strain engineering in silicon germanium SiGe FinFET and its challenges and future perspectives TCAD simulation of multi gate MOSFET covering model calibration and device performance for analog and RF applications Description of the design of an analog amplifier circuit using digital CMOS technology of SCL for ultra low power VLSI applications Advanced Nanoscale MOSFET Architectures helps readers understand device physics and design of new structures and material compositions making it an important resource for the researchers and professionals who are carrying out research in the field along with students in related programs of study *Towards Real Learning Robots* Getachew Hailu, 2000 Reinforcement learning in a nutshell is a form of learning that enables the robot to construct a control law by a system of feedback signals that reinforce electrical path ways that produce correct response and conversely wipe out connections that produce errors Unfortunately without biasing it is a weak learning that presents unreasonable difficulty especially when it is applied to real robots The subject of this thesis is to

study for a particular class of problems the effects of different form of biases on the speed of learning as well as on the quality of final learned policy and to realize this learning paradigm on a physical robot by appropriately biasing the robot with domain knowledge that determines how much the robot knows about the different parts of its world Sputtering by Particle Bombardment Rainer Behrisch, Wolfgang Eckstein, 2007-07-26 Earlier books on this subject i e Sputtering by Particle Bombardment I III are nearly 20 years old but since then a lot of new and important work has been performed and published in international journals The planned book brings an overview about all the new results This concerns especially a new summary of the measured and calculated sputtering yields with an algebraic approximation formula for the energy and angular dependence of the yields This is especially useful for all colleagues who need sputtering yields for physics and or applied problems The computational methods for calculating sputtering yields are critically reviewed Molecular dynamics calculations have not been covered in the previous books on sputtering The influence of chemical effects on sputtering and the new models developed in the last years for understanding these effects such as for hydrogen ion bombardment of carbon are outlined New developments such as sputtering by MeV Ions and the mechanisms for understanding the effects are presented The new results about the angular and energy distributions of sputtered atoms are presented in an extra chapter
