Created for children ages birth to age three years and six months, the Toddler and Infant Motor Evaluation (TIME) assesses movement quality.

Five subtests that assess mobility, stability, motor organization, social/emotional abilities, and functional performance. Optional subtests are available for advanced practitioners and include component analysis, quality rating, and atypical movements.

Activities include sequencing movement into different positions and free-play with a caregiver. Open-ended parent questions along with a Likert questionnaire provide both contextual information and data on current performance.
