Generalized Inference in Repeated Measures Samaradasa Weerahandi, 2004-08-24 A complete guide to powerful and practical statistical modeling using MANOVA Numerous statistical applications are time dependent Virtually all biomedical pharmaceutical and industrial experiments demand repeated measurements over time The same holds true for market research and analysis Yet conventional methods such as the Repeated Measures Analysis of Variance Rm ANOVA do not always yield exact solutions obliging practitioners to settle for asymptotic results and approximate solutions Generalized inference in Multivariate Analysis of Variance MANOVA mixed models and growth curves offer exact methods of data analysis under milder conditions without deviating from the conventional philosophy of statistical inference Generalized Inference in Repeated Measures is a concise self contained guide to the use of these innovative solutions presenting them as

extensions of rather than alternatives to classical methods of statistical evaluation Requiring minimal prior knowledge of statistical concepts in the evaluation of linear models the book provides exact parametric methods for each application considered with solutions presented in terms of generalized p values Coverage includes New concepts in statistical inference with special focus on generalized p values and generalized confidence intervals One way and two way ANOVA in cases of equal and unequal variances Basic and higher way mixed models including testing and estimation of fixed effects and variance components Multivariate populations including basic inference comparison and analysis of variance Basic widely used repeated measures models including crossover designs and growth curves With a comprehensive set of formulas illustrative examples and exercises in each chapter Generalized Inference in Repeated Measures is ideal as both a comprehensive reference for research professionals and a text for students
