Improved Aeroprediction Code Frankie Gale Moore, Roy Mitchell McInville, Thomas C. Hymer, 1993 New and improved version of the Naval Surface Warfare Center Dahlgren Division aeroprediction code AP93 has been developed The new code contains new technology that allows planar aerodynamics of axisymmetric solid rocket type weapons to be computed with engineering accurately over the entire Mach number range and for angles of attack to 30 deg New technology developed and included in the AP93 includes A new engineering method to compute aeroheating information at a high Mach number Extension of the second order shock expansion theory to include real gas effects including several new pressure prediction techniques An improved body alone nonlinear normal force method New methods for computing nonlinear aerodynamics of wing alone wing body and body wing due to angle of attack and wing body due to control deflection and a new base drag database and improved empirical base drag estimation technique Aeroprediction code AP93 Planar aerodynamics High mach number

Reliability-Based Optimization of Floating Wind Turbine Support Structures Mareike Leimeister, 2023-01-01 This book pursues the ambitious goal of combining floating wind turbine design optimization and reliability assessment which has in fact not been done before The topic is organized into a series of very ambitious objectives which start with an initial state of the art review followed by the development of high fidelity frameworks for a disruptive way to design next generation floating offshore wind turbine FOWT support structures The development of a verified aero hydro servo elastic coupled numerical model of dynamics for FOWTs and a holistic framework for automated simulation and optimization of FOWT systems which is later used for the coupling of design optimization with reliability assessment of FOWT systems in a computationally and time efficient manner has been an aim of many groups internationally towards implementing a performance based goal setting approach in the design of complex engineering systems The outcomes of this work quantify the benefits of an optimal design with a lower mass while fulfilling design constraints Illustrating that comprehensive design methods can be combined with reliability analysis and optimization algorithms towards an integrated reliability based design optimization RBDO can benefit not only the offshore wind energy industry but also other applications such as among others civil infrastructure aerospace and automotive engineering
