Gregory,David R. Wilcox,2015-11-01 A Choice Outstanding Academic Title The Zuni are a Southwestern people whose origins have long intrigued anthropologists This volume presents fresh approaches to that question from both anthropological and traditional perspectives exploring the origins of the tribe and the influences that have affected their way of life Utilizing macro regional approaches it brings together many decades of research in the Zuni and Mogollon areas incorporating archaeological evidence environmental data and linguistic analyses to propose new links among early Southwestern peoples The findings reported here postulate the differentiation of the Zuni language at least 7 000 to 8 000 years ago following the initial peopling of the hemisphere and both formulate and test the hypothesis that many Mogollon populations were Zunian speakers Some of the contributions situate Zuni within the developmental context of Southwestern societies from Paleoindian to Mogollon Others test the Mogollon Zuni hypothesis by searching for contrasts between these and neighboring peoples and tracing these contrasts through macro regional analyses of environments sites pottery basketry and rock art Several studies of late prehistoric and protohistoric settlement systems in the Zuni area then express more cautious views on the Mogollon connection and present insights from Zuni traditional history and cultural geography Two internationally known scholars then critique the essays and the editors present a new research design for pursuing the question of Zuni origins By taking stock and synthesizing what is currently known about the origins of the Zuni language and the development of modern Zuni culture *Zuni Origins* is the only volume to address this subject with such a breadth of data and interpretations It will prove invaluable to archaeologists working throughout the North American Southwest as well as to others struggling with issues of ethnicity migration incipient agriculture and linguistic origins *Monarchs in a Changing World* Karen S. Oberhauser,Kelly R. Nail,Sonia Altizer,2015-11-16 Monarch butterflies are among the most popular insect species in the world and are an icon for conservation groups and environmental education programs Monarch caterpillars and adults are easily recognizable as welcome visitors to gardens in North America and beyond and their spectacular migration in eastern North America from breeding locations in Canada and the United States to overwintering sites in Mexico has captured the imagination of the public Monarch migration behavior and chemical ecology have been studied for

decades Yet many aspects of monarch biology have come to light in only the past few years These aspects include questions regarding large scale trends in monarch population sizes monarch interactions with pathogens and insect predators and monarch molecular genetics and large scale evolution A growing number of current research findings build on the observations of citizen scientists who monitor monarch migration reproduction survival and disease Monarchs face new threats from humans as they navigate a changing landscape marked by deforestation pesticides genetically modified crops and a changing climate all of which place the future of monarchs and their amazing migration in peril To meet the demand for a timely synthesis of monarch biology conservation and outreach Monarchs in a Changing World summarizes recent developments in scientific research highlights challenges and responses to threats to monarch conservation and showcases the many ways that monarchs are used in citizen science programs outreach and education It examines issues pertaining to the eastern and western North American migratory populations as well as to monarchs in South America the Pacific and Caribbean Islands and Europe The target audience includes entomologists population biologists conservation policymakers and K 12 teachers George C. Homans A Javier Treviño, Charles Tilly, 2015-11-17 George C Homans History Theory and Method offers original essays written by scholars from the fields of sociology history anthropology and literature with the aim of assessing Homans's rich and diverse intellectual contributions It is the first volume in over thirty years to offer a reappraisal of the life and work of one of the twentieth century's leading social scientists **Biogeography** Mr. Rohit Manglik, 2023-12-23 Studies the distribution of plants and animals across space and time examining ecological processes biodiversity patterns habitat dynamics and species adaptation *Context Changes Everything* Alicia Juarrero, 2023-06-20 From the influential author of *Dynamics in Action* how the concepts of constraints provide a way to rethink relationships opening the way to intentional meaningful causation Grounding her work in the problem of causation Alicia Juarrero challenges previously held beliefs that only forceful impacts are causes Constraints she claims bring about effects as well and they enable the emergence of coherence In *Context Changes Everything* Juarrero shows that coherence is induced by enabling constraints not forceful causes and that the resulting coherence is then maintained by constitutive constraints Constitutive constraints in turn become governing constraints that regulate and modulate the way coherent entities behave Using the tools of complexity science she offers a rigorously scientific understanding of identity hierarchy and top down causation and in so doing presents a new way of thinking about the natural world Juarrero argues that personal identity which has been thought to be conferred through internal traits essential natures is grounded in dynamic interdependencies that keep coherent structures whole This challenges our ideas of identity as well as the notion that stability means inflexible rigidity On the contrary stable entities are brittle and cannot persist Complexity science says Juarrero can shape how we meet the world how what emerges from our interactions finds coherence and how humans can shape identities that are robust and resilient This framework has significant implications for sociology economics political theory business and

knowledge management as well as psychology religion and theology It points to a more expansive and synthetic philosophy about who we are and about the coherence of living and nonliving things alike Behavior Analysis and Learning Erin B. Hornborg, Jonathan D. Hill, 2011-10-31 A transdisciplinary collaboration among ethnologists linguists and archaeologists Ethnicity in Ancient Amazonia traces the emergence expansion and decline of cultural identities in indigenous Amazonia Hornborg and Hill argue that the tendency to link language culture and biology essentialist notions of ethnic identities is a Eurocentric bias that has characterized largely inaccurate explanations of the distribution of ethnic groups and languages in Amazonia The evidence however suggests a much more fluid relationship among geography language use ethnic identity and genetics In Ethnicity in Ancient Amazonia leading linguists ethnographers ethnohistorians and archaeologists interpret their research from a unique nonessentialist perspective to form a more accurate picture of the ethnolinguistic diversity in this area Revealing how ethnic identity construction is constantly in flux contributors show how such processes can be traced through different ethnic markers such as pottery styles and languages Scholars and students studying lowland South America will be especially interested as will anthropologists intrigued by its cutting edge interdisciplinary approach

World History Candice Goucher, Linda Walton, 2013-03-12 World History Journeys from Past to Present uses common themes to present an integrated and comprehensive survey of human history from its origins to the present day By weaving together thematic and regional perspectives in coherent chronological narratives Goucher and Walton transform the

Evolution in Four Dimensions, revised edition Eva Jablonka, Marion J. Lamb, 2014-04-11 Now updated with the latest research this pioneering accessible study argues for a more complex view of evolution proposing there is more to heredity than just genes In this revised edition the widely read *Evolution in Four Dimensions* Eva Jablonka and Marion Lamb propose that there are four dimensions in heredity These four inheritance systems play a role in evolution which they argue can all provide variations upon which natural selection can act Genetic Epigenetic or non DNA cellular transmission of traits Behavioral Symbolic transmission through language and other forms of symbolic communication Jablonka and Lamb present a richer more complex view of evolution than that offered by the gene based Modern Synthesis arguing that induced and acquired changes also play a role Their lucid and accessible text is accompanied by lively drawings and each chapter ends with a dialogue in which the authors refine their arguments against the vigorous skepticism of the fictional I M for Ipcha Mistabra Aramaic for the opposite conjecture This revised edition reflects the spate of new discoveries in biology since the book was first published offering corrections an updated bibliography and a substantial new chapter on each of the four dimensions with special attention to the epigenetic where there has been an explosion of new research
