

ENERGY, WORK, POWER AND MACHINES

Energy

This is the ability to do work.

Forms of energy.

1. **Chemical energy:** - this is found in foods, oils charcoal firewood etc.
2. **Mechanical energy:** - there are two types;
 - i. **Potential energy** - a body possesses potential energy due to its relative position or state
 - ii. **Kinetic energy** - energy possessed by a body due to its motion i.e. wind, water
 - iii. **Wave energy** - wave energy may be produced by vibrating objects or particles i.e. light, sound or tidal waves.
 - iv. **Electrical energy** - this is energy formed by conversion of other forms of energy i.e. generators.

Transformation and conservation of energy

Any device that facilitates energy transformations is called **transducer**. Energy can be transformed from one form to another i.e. mechanical - electrical - heat energy. **The law of conservation of energy states that "energy cannot be created or destroyed; it can only be transformed from one form to another".**

Work

Work is done when a force acts on a body and the body moves in the direction of the force.

Work done = force $\times$ distance moved by object

$$W = F \times d$$

Work is measured in Nm. **1 Nm = 1 Joule (J)**

Examples

1. Calculate the work done by a stone mason lifting a stone of mass 15 kg through a height of 2.0 m. (take $g=10\text{N/kg}$)
Solution
Work done = force $\times$ distance
 $= (15 \times 10) \times 2 = 300 \text{ Nm or } 300 \text{ J}$
2. A girl of mass 50 kg walks up a flight of 12 steps. If each step is 30 cm high, calculate the work done by the girl climbing the stairs.
Solution
Work done = force $\times$ distance
 $= (50 \times 10) \times (12 \times 30) + 100 = 500 \times 3.6 = 1,800 \text{ J}$
3. A force of 7.5 N stretches a certain spring by 5 cm. How much work is done in stretching this spring by 8.0 cm?
