Instructions

Write two public static methods in the `U6_L4_Activity_Two` class. The first should have the signature `swap(int[] arr, int i, int j)` and return type `void`. This method should swap the values at the indices `i` and `j` of the array `arr` (precondition: `i` and `j` are both valid indices for `arr`).

The second method should have the signature `allReverse(int[] arr)` and return type `void`. The method should swap the values of all the last elements with the beginning elements in the array, so that for example the array `[1, 2, 3, 4, 5, 6]` becomes `[6, 5, 4, 3, 2, 1]` after this method is called.

Hint: Use a for loop alongside the swap method to create the `allReverse` method.

Use the runner class to test this method; do not add a main method to your code in the `U6_L4_Activity_Two.java` file or it will not be scored correctly.
