

How to Find the Scale Factor

A **scale factor** describes how much a shape has been enlarged. To do this, you multiply every side length of a shape by the scale factor to enlarge it. The sizes of the angles do not change. Enlarging a shape by a scale factor **greater than 1** will make the shape **bigger**.

Example Shape A has been enlarged by scale factor 2 to give shape B.

Shape A has been enlarged by scale factor $\frac{1}{2}$ to shape B.

Enlarging a shape by a scale factor between 0 and 1 will make the shape smaller. This is often written as a fraction and is known as a fractional scale factor.
