have placed a growing premium on reducing costs and improving operational efficiencies and many banks have turned to lean programs as a useful tool Most of these banks will find themselves disappointed however because few lean initiatives in our experience deliver the expected results The near and longer term impact on costs proves to be far less than expected and any gains in efficiency prove to be either temporary or too limited in scope to make a real difference There is no fundamental lasting change in the way the bank conducts its operations and hence little impact on long term performance The problem is not with lean itself however Indeed we believe that lean has much to offer banks The problem lies in the approach and implementation Typically banks go wrong in one of two ways One they apply lean too narrowly and from too limited a perspective There is no cohesive end to end view of the process itself or the alignment of all of its elements Alternatively the effort is driven solely from the top down and fails to engage and involve the key people who actually perform the critical tasks within the process This leads to a lack of process ownership and accountability The end result in either case is that the
