L. Sproston,R. Stanway,E. W. Williams,1994 *Active Engine Mount* Stefan Loheide,2019 **Study Characteristic of Engine Mount for Effectively Reducing the Vibration of Car Engine** Tushar Uttamrao Patil,2014

Comfortable ride is one of the main index of comfortable vehicle and engine mount plays important role in it Automobile industries are in need of reducing the vibration forces to satisfy customer requirements Vibration of car engine arises from unbalanced forces of engine which are transmitted from engine to chassis and road induced vibration which is controlled by using proper engine mounts and suspension system The purpose of this thesis is to study the vibration of automobile engine Engine mount with elastomeric and hydraulic mounts are developed Their performance evaluated using bond graph on entire frequency range Engine mount parameters are optimized by using bond graph optimization method Sources of engine excitation forces are identified Engine reciprocating and rotating parts contribute in generating vertical excitation forces Mounts characteristics are analyzed by their excitation frequency and amplitude Hydraulic engine mount are more effective than rubber mount because their frequency and amplitude response is superior Fluid analysis is more complex so linear models and theory on two degree of freedom is developed in this thesis Presently companies are more concern about

customer satisfaction in automobile industries Passenger may get more comfort if vibration induced due to uneven road or engine is reduced Selection of proper engine mount location and optimization of mounts parameter as per application is required Force transmitted to passengers needs to be reduced In this thesis I applied knowledge from my curricular courses like vibration technology and computer aided design of dynamic system which helped me to build bond and block diagram of whole powertrain system I used software CAMPG Matlab Mathematica and Nastran to optimize parameter Hydraulic engine mounts can be made more effective by varying the inertia area and stiffness parameter They can operate on wide frequency range by varying stiffness using inertia area Transmissibility is reduced which enables more comfortable ride *Active Engine Mount System of a Vehicle* Hafiz Farhan Maqbool,2012 *Active Engine Mount System of a Vehicle* Hafiz Farhan Maqbool,2012-07 Variable cylinder management is fuel efficient technology enhancing both economic and environmental performances and is being adapted by various internationally recognized companies such as HONDA With the use of Variable Cylinder system the purpose of this study is to control and maintain the vibration characteristics when the number of operating cylinders are changing from 6 to 3 In order to achieve this goal a novel adaptive algorithm based on Filtered X LMS algorithm is proposed Further a suitable location of active engine mounts on the chassis in order to control and minimize the heave longitudinal and lateral motions at the driver s head rest position is found out by defining the new objective function A reasonable amount of control effort of both the actuators has been reduced at optimal location Lastly a comparison has been performed between two and three actuators cases and it can be seen from the simulation results that the performance has been improved however power consumption in case of three actuators has been increased Therefore there is a kind of trade off situation between the performance and the power consumption
