

LIVE VS LOAD WIRING

"Line" wires deliver power from the source to a device, while "load" wires extend that power to other devices along the circuit. In simpler terms, they're also known as incoming/upstream and outgoing/downstream wires, respectively.

This terminology is device-specific and depends on the position of the device in the circuit: a wire is considered "line" when it brings power into the device and "load" when it takes power from the device to the next one downstream. Therefore, a "load" wire for one device can be a "line" wire for the next device in the circuit.
