3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which students have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error / contradiction negates each correct response. So, if the number of errors / contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution?

[1 mark]

Student	Response	Marks awarded
1	green, 5	0
2	red*, 5	1
3	red*, 8	0

Example 2: Name two magnetic materials.

[2 marks]

Student	Response	Marks awarded
1	iron, steel, aluminium, copper	2

3.2 Marking of questions requiring a list

For questions requiring a specified number of responses (marked as a specified number of marks), students are required to provide a specified number of responses. For example, for a question requiring two correct answers, a list of three or four correct answers will result in a mark of 1 for the question, with a note to be awarded.

3.3 Marking questions requiring a calculation

When a question requires a calculation, the mark scheme will specify the number of marks available. For questions requiring a calculation, students are required to show their working. For questions requiring a calculation, students may show their working. For questions requiring a calculation, the mark scheme will specify the number of marks available.
