 recovered on April 18th 2016 The experiments described were selected from 100 proposals from various institutions in China
 and around the world and have never previously been conducted in the respective fields They involve fluid physics and
 materials science and primarily investigate the kinetic properties of matter in a space microgravity environment The book
 provides a comprehensive review of these experiments as well as the mission s execution data collection and scientific

System Components Interaction on its Performance Vincent Peltier,2024-11-15 The compressor bleed air system is part of
 the secondary air system of an aero engine or a stationary gas turbine It extracts air out of the compressor through slots or
 holes placed in the casing or shaft of the engine Typically the bleeding air is collected through a circumferential manifold and
 is then fed into a number of exit tubes guiding the air to different applications Compressor bleed air systems are generally
 designed according to two rules minimise the total pressure loss in the system in order to locate the off take as far upstream
 in the compressor as possible and at the same time minimise the local influence of the bleed air extraction on the compressor
 s operating range Due to assembly weight and cost constraints the complete compressor bleed air system must remain as
 compact as possible It requires placing the components close to each other which in turn implies strong interactions between
 the components The choice of an exit tube configuration for instance is crucial as it affects the manifold flow losses the
 bleeding uniformity and the bleed air system costs In the present work the effects of the interaction between commonly used
 compressor bleed air system components have been investigated The cross influence of these components is analysed
 computationally and experimentally based on total pressure loss and bleed uniformity In addition these results are compared
 with 1D network assumptions widely used in industry in order to improve engine design modelling
